Chapter 03

In the name of Allah, the Most Merciful, the Most Kind

Geography of Pakistan

Physiography

- **Mountain;** the mountains of Pakistan are divided into two parts, namely Northern and North-Eastern and western mountains.
- The Himalayas, Siwalik Hills, Pir Panjal mountain, the Ladhek mountain range, the krakarm rang.
- The Hindu Kush mountain, the koh-e-safad rang, the Waziristan hill, the Suleiman rang .the kirthar rang**.**
- **Plateaus**; there are two plateau in the Pakistan namely, the potwar plateau and the Baluchistan plateau**.** Potwar plateau ranges from 300 to 600 meters heights.
- Baluchistan plateau range is about 700 meters to 1500 meters heights. It has many minerals.

Physiography

Plains; there are three plains, the upper Indus plain, the lower Indus plain, and the Indus delta.

- **Deserts including coastal area;** The famous deserts are; Thal desert it is located Mianwali, Muzufferghur. Cholistan desert it is located in Bahawalpur. Thar and Nara desert, it is located in Therparker, Umer kot and Sangher.

Climatic Regions of Pakistan

- Climate is the average weather in a given area over a longer period of time. Such as air pressure, temperature, humidity and rainfall are as termed as the climate of an area.
- **Climatic types**
- One of five classifications of the Earth's climates: **tropical, dry, mild, continental, and polar.**
- **Tropical climates;** It defined by a monthly average temperature of 18 °C (64.4 °F) or higher in the coolest month, and feature hot temperatures all year-round. Tropical climates are hot, humid, and rainy climates.

Climatic Regions of Pakistan

- **Dry**; a dry climate is defined simply as an area with perennial water deficit, little biological productivity, little carrying capacity, and restricted human. **Deserts in Africa, Saudi Arabia, Australia and the Southwest U.S.** are all examples of the dry climate. And Dry climate zones cover about 26 percent of the world's land area.

- **Mild**; Mild weather is pleasant because it is neither extremely hot nor extremely cold. Mild climates have warm summers and mild winters, mild weather as temperatures between 64 and 86 degrees F, with less than a half inch of rain.

Climatic Regions of Pakistan

- **Mild**; Mild weather is pleasant because it is neither extremely hot nor extremely cold. Mild climates have warm summers and mild winters, mild weather as temperatures between 64 and 86 degrees F, with less than a half inch of rain.

Climatic Regions of Pakistan

- **Continental:** a relatively dry climate with very hot summers and very cold winters, characteristic of the central parts of Asia and North America.

- **Polar.** A polar climate ***consists of cool summers and very cold winters***, which results in treeless tundra, glaciers, or a permanent or semi-permanent layer of ice.

Hydrological environment

In terms of environmental measurements, hydrology refers to the physical movement of a body of water, including changes in water level, flow, and other dynamic processes. Most hydrology applications involve surface water systems, such as rivers, open-channels and estuaries.

Hydrological environment

- Hydrology is the scientific study of the movement, distribution, and management of water on Earth and other planets, Hydrology, particularly water flow, can affect the local environment due to changes in water quality and quantity. These changes can be man-made (e.g. a dam release) or weather-related (flooding), or due to a combination of both factors (rainfall runoff caused by poor agricultural practices.
