Literature Search for [Your Topic]

- A systematic approach to identifying existing knowledge
- Presented by: [Your Name]
- Date: [Insert Date]

Introduction

- • Importance of literature search in research
- • Helps identify gaps, avoid duplication, and refine research questions

Objectives of Literature Search

- • Gather relevant studies on [topic, e.g., “lavender aromatherapy for dental anxiety”]
- • Assess the current evidence base
- • Identify appropriate methodologies
- • Guide the development of research tools and interventions

Databases Used

- • PubMed
- • Google Scholar
- • Scopus
- • Cochrane Library
- • Web of Science
- • Local/regional databases

Search Strategy

- • Keywords: “Lavender,” “Aromatherapy,” “Dental Anxiety,” “RCT,” “Essential Oils”
- • Boolean operators: AND, OR, NOT
- • Example: "lavender aromatherapy" AND "dental anxiety" AND "randomized control trial"

Inclusion and Exclusion Criteria

- **Inclusion:**
- • RCTs
- • Articles from 2010 to 2025
- • English language
- • Human studies

- **Exclusion:**
- • Animal studies
- • Non-peer reviewed articles

Results of the Search

- • Total articles retrieved: 214
- • After screening titles/abstracts: 45
- • Full-text reviewed: 25
- • Final studies included: 12

- (Insert PRISMA flow diagram here)

Key Findings from the Literature

- • Reduction in anxiety with lavender use
- • Variability in delivery method
- • Doses and duration not standardized
- • Few studies on dental anxiety

Gaps in Literature

- • Limited RCTs in dental settings
- • Small sample sizes
- • Lack of South Asian population studies
- • Inconsistent outcome measures

How It Informed Our Study

- • RCT design based on literature trends
- • Selected validated anxiety scales (e.g., MDAS, STAI)
- • Inhalation method chosen for efficacy
- • Dental clinic setting targeted

Conclusion

- • Strong foundation provided by literature search
- • Helped refine question and methodology
- • Identified clear research gap
