ANATOMY

BCQs

- Q1) Choose the false statement regarding sesamoid bone.
- Options:
- a) Patella is largest one.
- b) They are covered by periosteum.
- c) Found under tendons.
- d) They minimize the friction.
- e) Maintain local circulation

- Q2) Length wise growth of long bones occurs by.
- Options:
- a) Diaphysis.
- b) Epiphysis.
- c) Epiphysis plate of cartilage.
- d) Metaphysis.
- e) Number of nutrient foramen

- Q3) Select incorrect statement regarding architecture of skeletal muscles.
- **Options:**

a) Sartorius is strap like muscles.

b) Oblique fibers are more power full.

c) Biceps is fusiform in shape.

d) Temporalis is example of triangular muscle.

e) Parallel fibers have less range of movement.

- Q4) Choose the best example regarding pneumatic bone.
- **Options:**

a) Mandible.
b) Nasal.
c) lacrimal.
d) Inferior nasal concha.
e) Maxilla

- Q5) choose odd statement regarding cardiac muscles.
- **Options:**

a) Multi nucleated.
b) Fibers branched.
c) Intercalated disc.
d) Involuntary.
e) Innervated by Autonomic nervous system.

- Q6) choose correct statement regarding skeletal muscles.
- **Options:**

a) Fixed end of muscle is called insertion.

b) Origin is movable end of muscle.

c) Fleshy part of muscle is called tendon.

d) Flattened end of muscle is called aponeurosis.

e) Origin is always proximal to insertion

- Q7) Tooth and its socket is example of which joint.
- **Options:**

a) Suture.
b) Symphysis.
c) Syndesmosis.
d) Gomphosis.
e) Synchondrosis

- Q8) Regarding secondary cartilagenous joint choose the incorrect statement.
- **Options:**

a) Also called symphysis.

b) Bones are united by disc of fibro cartilage.

c) Found in median plane of body.

d) Manubrio sternal joint is one of its example.

e) Articular surface is cover by elastic cartilage..

- Q9) Choose the type of synovial joint in which articular surface is reciprocally concavo-convex
- **Options:**

a) Hinge joint

b) Pivot joint.

c) Saddle joint

d) Ball and socket joint.

e) Plane joint

- Q10) Choose incorrect statement regarding neural crest cell derivatives:
- **Options:**

a) Adrenal cortex
b) Melanocytes
c) Odontoblasts
d) Dorsal root ganglia.
e) Bones of face

- Q11) Fetal portion of placenta is formed by:
- **Options:**

a) Chorion frondosum
b) Chorion leave
c) Decidua Basalis
d) Decidua caspularis
e) Decidua peritalis

- Q12) During 14th week which maternal antibodies are transported from mother to fetus
- **Options:**

a) IgA
b) IgE
c) IgM
d) IgD.
e) IgG

- Q13) Regarding fetal period choose the true statement:
- **Options:**

a) Includes 7th week till birth
b) Age is estimated by somites number
c) Standing height is indicated as crown rump length
d) Weight of fetus increases during initial period
e) Slowdown in growth of head is most striking change

- Q14) Choose the wrong statement regarding endodermal derivatives:
- **Options:**

a) Foregut
b) Midgut
c) Rectum
d) Oral cavity.
e) Epithelial lining of respiratory tract

- Q15) Organ which develops from intermediate mesoderm:
- **Options:**

a) Liver
b) Spleen.
c) Kidney
d) Gall bladder
e) Urinary bladder

- Q16) Choose incorrect statement regarding somites:
- **Options:**

a) Blocks of paraxial mesoderm
b) Forms the axial skeleton
c) First pair of somites appear at 20th day of development
d) Scleratome give rise to muscles of back
e) Age is estimated during embryonic period

- Q17) Site of fertilization is:
- **Options:**

a) Ampulla of uterine tube
b) Isthimus of uterine tube
c) Uterus
d) Cervix
e) Ovary

- Q18) False statement regarding events of 2nd week of development is:
- **Options:**

a) Formation of primary villi

b) Establishment of uteroplacental circulation

c) Formation of extraembryonic mesoderm

d) Bilaminar germ disc is formed

e) Implantation begins

- Q19) Layer of multinucleated zone without distinct cell boundaries:
- **Options:**

a) Cytotrophoblast
b) Epiblast
c) Hypoblast
d) Syncytotrophoblast
e) Amnioblast

- Q20) Dentin producing cells, odontoblasts develop from?
- **Options:**

a) Endoderm
b) Paraxial mesoderm
c) Intermediate mesoderm
d) Neural crest cells
e) Ectoderm

- Q21) Select the odd statement regarding events of 3rd week of development:
- **Options:**

a) Gastrulation

b) Formation of notochord

c) Primary villi are formed

d) Secondary villi are formed

e) Allantois appear

- Q22) Remnant of Primitive streak in sacrococcygeal region:
- **Options:**

a) Sacrococcygeal Teratoma
b) Sirengiomelia
c) Situs inversus
d) Holoprosencephaly
e) Spina bifida

- Q23) Maternal portion of placenta is formed by:
- **Options:**

a) Chorion frondosum
b) Decidua peritalis
c) Decidua Basalis
d) Chorion leave
e) Decidua capsularis

- 24) The basal surface of an epithelial cell is attached to the underlying basement membrane by a junction called:

a. Gap junction

b. Hemidesmosome

c. Macula adherens

d. Zonula adherens

e. Zonula occludens

- 25) The internal skeleton of a microvillus is made up of:

a. Actin filaments

b. Desmin filaments

c. Microtubules

d. Myosin filaments

e. Tonofibrils

- 26) Simple cuboidal epithelium is found in:

a. Conjunctiva
b. Epidermis
c. Esophagus
d. Gall bladder
e. Thyroid follicle

- 27)A researcher observes H&E stained tissue section of gall bladder under the light microscope. The lining epithelium most likely to be seen is:

a. Pseudostratified columnar
b. Simple cuboidal
c. Simple columnar
d. Simple squamous
e.Transitional

28)Regarding connective tissue cells and their functions, choose the correct pair:

a. Adipocyte----------Production of heparin
b. Fibroblast----------Phagocytosis
c. Macrophage----------Synthesis of extracellular fibers
d. Mast cell----------Storage of fat
e. Plasma cell----------Production of antibody

- 29) Apocrine mode of secretion is found in:

a. Ceruminous glands of ear

b. Intestinal glands

c. Lacrimal glands

d. Mammary glands

e. Sebaceous glands

- 30) Perichondrium is an example of:

a. Adipose tissue
b. Dense irregular connective tissue
c. Dense regular connective tissue
d. Loose connective tissue
e. Reticular connective tissue
