ALL THE HISTOLOGY PAST PAPERS; COMPILED —-----by HMHDental

> Topic wise with reference at the end of every past pp
Answer key gonna be in another file same folder with explanation and flip sides

Cell Biology & Microscopic Technique

Which of the following parts of a light microscope gathers light and creates a beam of light to focus it onto the specimen to be observed? (BDS Mid-term 2022)

a) Condenser

b) Diaphragm

c) Eyepiece

d) Illuminator

e) Objective

Part of the microscope that converges light? (Anatomy mid 24)

a) Diaphragm

b) Condenser

c) Illuminator

d) Eyepiece

e) Objective

Which of the following is an acidic stain? (BDS Mid-term 2022)

a) Basic fuchsin

b) Eosin

c) Hematoxylin

d) Methylene blue

e) Toluidine blue

Which of the following is acidic dye? (Anatomy Mid 2025)

a) eosin

b) hematoxylin

c) methylene blue

d) basic fuchsin

e) toulidine blue

Acidic dye used in slide preparation? (Anatomy mid 24)

a) Fuscin

b) Eosin

c) Hematoxylin

Which of the following is an acidophilic dye? (Anatomy mid 24)

a) Eosin

b) Hematoxylin

c) Methylene blue

Non-membrane bound organelle is: (Anatomy Mock 2024)

a) Centriole

b) Golgi body

c) Mitochondria

d) Ribosome

e) Rough endoplasmic reticulum

Which one of the following is non membrane bound organelles? (Anatomy Mid 2025)

a) mitochondria

b) SER

c) RER

d) ribosome

e) golgi bodies

Which of the following is a non-membrane bound organelle? (BDS Mid-term 2022)

a) Golgi apparatus

b) Mitochondrion

c) Ribosome

d) Rough endoplasmic reticulum

e) Smooth endoplasmic reticulum

Cell organelle mainly involved in the synthesis of lipid is: (Anatomy Mid 2021)

a) Centrsome

b) Golgi apparatus

c) Mitochondria

d) Rough endoplasmic reticulum

e) Smooth endoplasmic reticulum

Cell apoptosis (cell death) is carried out by: (Mock Dental Exam)

a) Peroxisomes

b) Smooth Endoplasmic Reticulum

c) Lysosomes

d) Golgi apparatus

e) Mitochondria

While observing cell under electron microscope the cytoplasm of cell appears basophilic, this property is due to: (Mock Dental Exam)

a) Smooth Endoplasmic Reticulum

b) Mitochondria

c) Rough Endoplasmic Reticulum

d) Lysosomes

e) Peroxisomes

Example of microfilaments includes: (Anatomy Mid 2021)

a) Actin filaments

b) Desmin filaments

c) Keratin filaments

d) Neurofilaments

e) Vimentin filaments

Centrioles made of: (Anatomy mid 24)

a) microtubules

DNA and histone (something): (Anatomy Mid 2019)

a) Nucleosome

Mark the correct statement about different organelles of the cell: (Anatomy mock 2025-26)

a) Cristae are the infoldings of the outer membrane of mitochondria.

b) Centrioles are made up of microtubules.

c) Endoplasmic reticulum is studded with lysosomes on its surface.

d) Lysosomes are bounded by double membrane.

e) Nuclear envelope is connected to the golgi apparatus.

Mark the correct statement about different organelles of the cell: (MOCK DDC 2025)

a) Cristae are the infoldings of the outer membrane of mitochondria.

b) Centrioles are made up of microtubules.

c) Endoplasmic reticulum is studded with lysosomes on its surface.

d) Lysosomes are bounded by double membrane.

e) Nuclear envelope is connected to the golgi apparatus.

Epithelium & Glandular Histology

Pleura of lung is lined by: (Anatomy Mock 2024)

a) Pseudostratified columnar epithelium

b) Simple columnar epithelium

c) Simple cuboidal epithelium

d) Simple squamous epithelium

e) Transitional epithelium

Stratified columnar epithelium is found in: (Anatomy Mock 2024)

a) Alveoli of lung

b) Conjunctiva of eye

c) Esophagus

d) Follicles of thyroid gland

e) Uterus

Stratified columnar epithelium is found in the: (MOCK DDC 2025)

a) Alveoli of lung

b) Conjunctiva of eye

c) Distal convoluted tubules of kidney

d) Epidermis of skin

e) Uterus

Which type of epithelium lines the blood vessels? (Anatomy mock 2025-26)

a) Pseudostratified columnar epithelium

b) Simple columnar epithelium

c) Simple cuboidal epithelium

d) Simple squamous epithelium

e) Transitional epithelium

Simple cuboidal epithelium is found in: (Anatomy Mid 2021)

a) Conjunctiva

b) Epidermis

c) Esophagus

d) Gall bladder

e) Thyroid follicle

A researcher observes H&E stained tissue section of thyroid follicle in the light microscope. The lining epithelium most likely to be seen is: (Anatomy Mid 2025)

a) Pseudostratified columnar

b) Simple cuboidal

c) Simple columnar

d) Simple squamous

e) Transitional

Most appropriate histological feature of thyroid gland is the: (Anatomy mock 2025-26)

a) Absence of ducts.

b) Follicles filled with colloid.

c) Follicles lined by simple cuboidal epithelium.

d) Presence of parafollicular cells.

e) Richly vascular stroma.

Site of simple cuboidal? (Anatomy Mid 2019)

a) thyroid glad

Kidney is lined by? (Anatomy Mid 2019)

a) simple cuboidal

Simple columnar epithelium is found in: (Anatomy Mid 2025)

a) gall bladder

b) conjunctiva of eye

c) epidermis

A researcher observes H&E stained tissue section of gall bladder under light microscope. The lining epithelium most likely to be seen is: (Anatomy Mid 2021)

a) Pseudostratified columnar

b) Simple cuboidal

c) Simple columnar

d) Simple squamous

e) Transitional

Epithelial lining of gallbladder? (Anatomy Mid 2019)

a) simple columnar

Stomach is lined by: (Anatomy Mid 2021)

a) Pseudostratified columnar epithelium

b) Simple columnar epithelium

c) Simple cuboidal epithelium

d) Simple squamous epithelium

e) Transtional epithelium

Stratified squamous non-keratinized epithelium is found in: (BDS Mid-term 2022)

a) Conjunctiva

b) Epidermis

c) Esophagus

d) Gall bladder

e) Thyroid follicle

A researcher observes H&E stained tissue section of urinary bladder under the light microscope. The lining epithelium most likely to be seen is: (BDS Mid-term 2022)

a) Pseudostratified columnar

b) Simple cuboidal

c) Simple columnar

d) Simple squamous

e) Transitional

Basal layer of epithelium is attached to the basement membrane with the help of which junction? (Anatomy Mid 2025)

a) gap junction

b) hemidesmosome

c) macula adherens

d) zonula adherens

e) macula

The basal surface of an epithelial cell is attached to the underlying basement membrane by a junction called: (Anatomy Mid 2021)

a) Gap junction

b) Hemidesmosome

c) Macula adherens

d) Zonula adherens

e) Zonula occludens

The basal surface of an epithelial cell is attached to the underlying basement membrane by a junction called: (BDS Mid-term 2022)

a) Gap junction

b) Hemidesmosome

c) Macula adherens

d) Zonula adherens

e) Zonula occludens

Which junction joins the epithelium with the basement membrane? (Anatomy mid 24)

a) Hemidesmosomes

Submandibular salivary gland is a: (Anatomy Mock 2024)

a) Branched simple tubular gland

b) Coiled simple tubular gland

c) Compound acinar gland

d) Compound tubular gland

e) Compound tubuloacinar gland

Merocrine mode of secretion: (Anatomy Mid 2025)

a) sebaceous glands

b) salivary glands

c) sub mandibular glands

Holocrine mode of secretion? (Anatomy mid 24)

a) sebaceous gland

Holocrine mode of secretion is found in which of the following glands? (MOCK DDC 2025)

a) Ceruminous glands of ear

b) Intestinal glands

c) Lacrimal glands

d) Mammary glands

e) Sebaceous glands

Holocrine mode of secretion is found in: (BDS Mid-term 2022)

a) Ceruminous glands of ear

b) Intestinal glands

c) Lacrimal glands

d) Mammary glands

e) Sebaceous glands

Apocrine mode of secretion is found in: (Anatomy Mid 2021)

a) Ceruminous glands of ear

b) Intestinal glands

c) Lacrimal glands

d) Mammary glands

e) Sebaceous glands

Example of apocrine gland? (Anatomy Mid 2019)

a) mammary gland

Uterine gland is the example of? (Anatomy Mid 2019)

a) simple tubular gland

Connective Tissue & Cartilage

Tendon of a muscle is an example of: (Anatomy Mock 2024)

a) Adipose tissue

b) Loose connective tissue

c) Dense irregular connective tissue

d) Dense regular connective tissue

e) Reticular connective tissue

Tendon is example of: (Anatomy Mid 2025)

a) dense irregular connective tissue

b) loose connective tissue

c) dense regular connective tissue

A tendon of muscle is an example of: (Anatomy mock 2025-26)

a) Adipose tissue

b) Loose connective tissue

c) Dense irregular connective tissue

d) Dense regular connective tissue

e) Reticular connective tissue

Superficial and deep fascia are examples of: (Anatomy Mid 2021)

a) Adipose tissue

b) Loose connective tissue

c) Dense irregular connective tissue

d) Dense regular connective tissue

e) Reticular connective tissue

Superficial and deep fascia are examples of: (BDS Mid-term 2022)

a) Adipose tissue

b) Loose connective tissue

c) Dense irregular connective tissue

d) Dense regular connective tissue

e) Reticular connective tissue

Superficial and deep fascia are examples of? (Anatomy mid 24)

a) connective tissue

Which cells have signet like appearance? (Anatomy Mid 2025)

a) Adipocytes

b) Fibroblast

c) Myofibroblast

d) Histiocytes

Signet ring appearance is the characteristic feature of the: (Anatomy mock 2025-26)

a) Adipocyte

b) Fibroblast

c) Histiocyte

d) Mast cell

e) Plasma cell

Regarding connective tissue cells and their functions, choose the incorrect pair: (BDS Mid-term 2022)

a) Adipocyte----------Storage of fat

b) Fibroblast----------Synthesis of extracellular fibers

c) Macrophage----------Phagocytosis

d) Mast cell----------Wound closure

e) Plasma cell----------Production of antibody

Regarding connective tissue cells and their functions, choose the wrong pair: (Anatomy mock 2025-26)

a) Adipocyte----------Storage of fat

b) Fibroblast----------Synthesis of extracellular fibers

c) Macrophage----------Phagocytosis

d) Mast cell----------Wound closure

e) Plasma cell----------Production of antibody

Regarding connective tissue cells and their functions, choose the correct pair: (Anatomy Mid 2021)

+1

a) Adipocyte----------Production of heparin

b) Fibroblast----------Phagocytosis

c) Macrophage----------Synthesis of extracellular fibers

d) Mast cell----------Storage of fat

e) Plasma cell----------Production of antibody

Choose the wrong pair: (Anatomy mid 24)

a) Mast cells -------> wound contraction

Perichondrium is present in: (Anatomy Mid 2025)

a) Articular cartilage

b) Pubic symphysis

c) Intervertebral disc

d) External ear (auricle / external auditory meatus)

e) Meniscus of knee

At which location hyaline cartilage usually does not have a perichondrium? (BDS Mid-term 2022)

a) Articular cartilage

b) Costal cartilage

c) Epiphyseal cartilage

d) Laryngeal cartilage

e) Nasal cartilage

Perichondrium is an example of: (Anatomy Mid 2021)

a) Adipose tissue

b) Dense irregular connective tissue

c) Dense regular connective tissue

d) Loose connective tissue

e) Reticular connective tissue

Perichondrium is an example of: (BDS Mid-term 2022)

a) Adipose tissue

b) Dense irregular connective tissue

c) Dense regular connective tissue

d) Loose connective tissue

e) Reticular connective tissue

Perichondrium is the example of? (Anatomy Mid 2019)

a) dense connective tissue

Regarding cartilages, which of the following is true? (Anatomy mock 2025-26)

a) All articular cartilages are of elastic type.

b) All laryngeal cartilages are of hyaline type.

c) Nasal septum has elastic cartilage.

d) Skull cap develops in cartilage.

e) Temporomandibular joint disc is fibrocartilage.

Hyaline cartilage: (Anatomy Mid 2025)

a) Mainly composed of Type I collagen

b) Highly elastic and yellow in color

c) Glass-like appearance and has perichondrium

d) Found only in articular surfaces

e) Contains abundant adipose tissue

Regarding histology of fibrocartilage, choose the statement which is false: (MOCK DDC 2025)

a) Chondrocytes are arranged in the form of rows

b) Contains mainly type-I collagen

c) Extracellular matrix is generally acidophilic

d) Extracellular matrix reveals parallel running bundles of collagen fibers

e) Perichondrium is usually identifiable

Example of fibrocartilage? (Anatomy mid 24)

a) intervertevral disc

Bone & Muscle Histology

Regarding compact bone, choose the correct statement from the following: (Anatomy Mid 2025)

a) Periostium covers the bone matrix internally i.e around marrow cavity

b) Sharpey's fibers bind the bone matrix to periosteum

c) Volkman canal is present in the center of osteon

d) Osteocytes lie in the Howship's lacunae

e) Interstitial lamellae are present just beneath the periosteum

Regarding histology of compact bone, choose the correct statement: (Anatomy Mid 2021)

a) Periostium covers the bone matrix internally i.e around marrow cavity

b) Sharpey's fibers bind the bone matrix to periosteum

c) Volkman canal is present in the center of osteon

d) Osteocytes lie in the Howship's lacunae

e) Interstitial lamellae are present just beneath the periosteum

Regarding histology of compact bone, choose the correct statement: (Anatomy mock 2025-26)

a) Periosteum covers the bone matrix internally ie. around marrow cavity.

b) Sharpey's fibers bind the bone matrix to periosteum.

c) Volkman canal is present in the center of osteon.

d) Osteocytes lie in the Howship's lacunae.

e) Interstitial lamellae are present just beneath the periosteum.

Regarding histology of compact bone, choose the correct statement: (MOCK DDC 2025)

a) Periosteum covers the bone matrix internally i.e. around marrow cavity

b) Sharpey’s fibers bind the bone matrix to periosteum

c) Volkman canal is present in the center of osteon

d) Osteocytes lie in the Howship's lacunae

e) Interstitial lamellae are present just beneath the periosteum

Regarding compact bone, choose the correct statement from the following: (BDS Mid-term 2022)

a) Periostium covers the bone matrix internally i.e. around marrow cavity

b) Sharpey's fibers bind the bone matrix to periosteum

c) Volkman canal is present in the center of osteon

d) Osteocytes lie in the Howship's lacunae

e) Interstitial lamellae are present just beneath the periosteum

The periosteal arteries supply which area/part of a long bone? (Anatomy Mid 2025)

a) Inner 2/3 of the cavity

b) Outer 2/3 of the bone cortex

c) Diaphysis

d) Epiphysis

e) Entire bone equally

The periosteal arteries supply which area/part of a long bone? (MOCK DDC 2025)

a) Epiphysis

b) Inner 2/3rd of cortex

c) Medullary cavity

d) Metaphysis

e) Outer 1/3rd of cortex

Serology report of a 40 years old man reveals raised levels of parathyroid hormone. Which of the following bone cells is likely to be activated: (Anatomy Mid 2021)

a) Fibroblast

b) Osteoblast

c) Osteoclast

d) Osteocyte

e) Osteoprogenitor cell

Common histological feature between skeletal and cardiac muscle: (Anatomy Mid 2025)

a) cross striations

b) uni nucleated

c) diads

d) muscle fibres

Choose a histological feature that is common to both cardiac and skeletal muscles from the following: (Anatomy Mid 2021)

a) Intercalated discs

b) Cross striations

c) Diads

d) Each muscle fiber is multinucleated

e) Muscle fibers are branched

Choose a histological feature that is common to both cardiac and skeletal muscle from the following: (BDS Mid-term 2022)

a) Intercalated discs

b) Cross striations

c) Diads

d) Branched muscle fibers

e) Each muscle fiber has single central nucleus

What is the common characteristic between cardiac and skeletal muscles? (Anatomy mid 24)

a) both are striated

Endomysium is a dense connective tissue sheath that surrounds: (Anatomy mock 2025-26)

a) A fascicle of muscle fibers

b) A muscle fiber

c) A myofibril

d) A myofilament

e) A whole muscle

What is true about the cardiac muscle fibers? (Anatomy mock 2025-26)

a) Are cylindrical and branching.

b) Contain nuclei at the periphery.

c) Show absence of gap junctions.

d) Have regenerative ability.

e) Have triads.

Specialized & Vascular Histology

Which of the following organs has fenestrated capillaries? (Anatomy mock 2025-26)

a) Bone marrow

b) Kidney

c) Liver

d) Lung

e) Skeletal muscle

Example of fenestrated capillary? (Anatomy Mid 2019)

a) kidney

Which organ has sinusoidal capillaries? (Anatomy Mid 2025)

a) Kidney

b) Lung

c) Liver

d) Brain

Keratohyalin granules present in what layer: (Anatomy Mid 2025)

a) Stratum basale

b) Stratum spinosum

c) Stratum granulosum

d) Stratum lucidum

e) Stratum corneum

Keratohyaline granules are present in this layer of skin: (Anatomy Mid 2019)

a) Stratum Granulosum

Mark the odd/false statement regarding histology of tongue from the following: (MOCK DDC 2025)

a) Each fungiform papilla consists of a rounded head and a pedicle like a mushroom.

b) The circumvallate papillae are located anterior to sulcus terminalis.

c) The filiform papillae are lined by stratified squamous non-keratinized epithelium.

d) The mucous glands of the root release their secretion into the crypts of lingual tonsil.

e) The pharyngeal part of tongue does not contain papillae.

Which of the following lymphoid organs is hemi-capsulated? (Anatomy mock 2025-26)

a) Bone marrow

b) Lymph node

c) Spleen

d) Thymus

e) Tonsil

Hematopoietic tissue in healthy adults is: (Mock Dental Exam 2025)

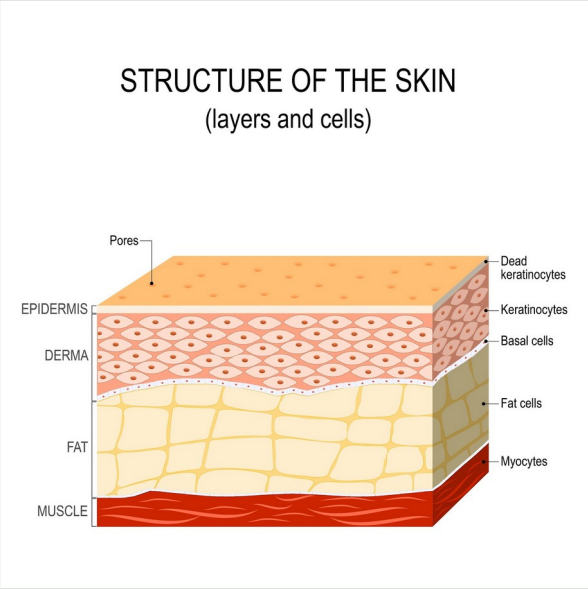

a) Spleen

b) Liver

c) Red bone marrow

d) Kidney

e) Lymph node

ANSWER KEY OTHER FILE SAME FOLDER; with reference book explanation and flip sides
