DEPARTMENT OF ANATOMY (DUHS)
BDS 1ST YEAR BATCH VII MOCK EXAM 2019

Total Marks: 100
Time: 2 Hours

1. Vertical line which divides the body into a left section and a right section is

   a) Coronal plane
   b) Sagittal plane
   c) Transverse plane
   d) Vertical plane
   e) Para sagittal plane

2. Circumduction is a combination of:

   a) flexion, extension, adduction and abduction
   b) Flexion and extention
   c) 1Adduction and abduction
   d) extension, adduction and abduction
   e) flexion, adduction and abduction
   f) Transverse plane
   g) Horizontal plane
   h) Obligue plane

3. The most superficial layer of the skin is:

   a) Dermis
   b) Epidermis
   c) Hypodermis
   d) Endodermis
   e) Intradermis

4. A pilosebaceous unit of skin is comprised of:

   a) hair, hair follicle, arrector pili muscle and sebaceous gland
   b) hair and hair follicle
   c) Hair follicle and sebaceous gland
   d) hair, hair follicle and arrector pili muscle
   e) hair follicle, arrector pili muscle and sebaceous gland

59. Which of the following muscle plays major role in opening the Jaw

a) Masseter
b) Medial pterygoid
c) Lateral pterygoid
d) Buccinator
e) Temporalis muscle

60. Select incorrect statement regarding components of anterior triangle

a) Myohyoid muscle
b) Digastric muscle
c) Sternocleiod mastoid muscle
d) Thyrohyoid muscle
e) Sternohyoid muscle

61. Regarding the muscles of face:

a) Embryologically the muscles of facial expression are developed from the mesoderm of the second pharyngeal arch.
b) Muscles of facial expression are supplied by the maxillary nerve.
c) Buccinator is an accessory muscle of mastication so supplied by the mandibular division of trigeminal nerve.
d) Levator palpebrae superioris is supplied by facial nerve.
e) Occipitofrontalis helps in the movement of skin of face.

62. Which one of the following is best statement about scalp

a) Scalp has very poor nerve supply
b) Spread of infection is a common phenomena
c) Epicranial muscles are supplied by mandibular nerve
d) Wounds of the scalp bleed profusely because the vessels do not retract
e) There are abundant emissary veins in frontal region

63. Which part of the frontal bone contributes to the floor of the anterior cranial fossa?

a) Nasal.
b) Squamous.
c) Orbital plate.
d) Maxillary process.
e) Zygomatic process.
