Remember OB is main subject and Q hardly repeat so just grab the style and **read book**

Alveolar Bone

1. Tight control between bone formation and resorption occurs by coupling during remodeling at the: A) Sharpey's fibers B) Resorption zone C) Calcified nodules D) Resting zone E) Reversal zone (ORAL BIOLOGY MIDTERM 2025)

---

2. Bone adjacent to periodontal ligament that contains a great number of Sharpey's fibers is known as: a. Lamina dura b. Bundle bone c. Lamina propria d. Lamina densa e. Alveolar bone proper (Ob Midterm 2022)

---

3. The alveolar process is a part of which of the following structures: a. Pre maxilla b. Palate c. Maxilla and mandible d. Alveolar bone proper e. Cortical plate (Ob Midterm 2022)

---

4. Following is typical feature of woven bone: a. Enriched in osteocalcin b. Show turnover c. Forms slowly d. Rapid matrix mineralization e. Plywood orientation of collagen fibers (Ob Midterm 2022)

---

5. Following bone cells may prevent hypermineralisation by releasing pyrophosphate: a. Osteoblast b. Osteoclasts c. Osteocytes d. Osteoid e. Osteocytes and osteoclasts (Ob Midterm 2022)

---

6. Development of blood cells, adipocytes, and macrophages occurs in: a. Yellow bone marrow b. Red bone marrow c. Cortical bone (OB Mid Term BCQs)

---

7. Inorganic component for bone hardness is: a. Collagen type I b. Hydroxyapatite crystals c. Water (OB Mid Term BCQs)

---

8. Endochondral ossification is NOT present in: a. Mandible body b. Condyle c. Ethmoid bone (OB Mid Term BCQs)

---

9. Osteoclasts are: a. Mononucleated b. Multi-nucleated c. Non-nucleated (OB Mid Term BCQs)

---

10. In addition to support, locomotion, and protection, bones also serve as: a. Reservoir of minerals b. Source of vitamin C c. Primary site of protein synthesis (OB Mid Term BCQs) (**2025)**

---

11. Primary function of alkaline phosphatase is: a. To destroy bone b. Provide phosphate c. Form collagen (OB Mid Term BCQs)

---

12. Skull is an example of: a. Long bone b. Flat bone c. Irregular bone (OB Mid Term BCQs)

---

13. Trabeculae arrangement in cancellous bone is: a. Random b. Along lines of maximum internal stress c. Circular (Ob mock dikiohs 2024)

---

14. First layer of unmineralized matrix secreted by osteoblasts is: a. Osteoid b. Predentin c. Cementoid (Ob mock dikiohs 2024)

---

15. Lamina dura is the lining of the: a. Tooth socket b. Pulp chamber c. Enamel surface (Ob proffs 2025)

---

16. Difference between bone and cementum is that cementum resorption occurs with: a. Difficulty b. Ease c. Same rate as bone (Ob proffs 2025)

---

17. Type of collagen found in bone, cementum, and dentin: a. Type 1 & 5 b. Type 2 & 4 c. Type 3 only (OB Mid Term BCQs)

---

18. What is the primary difference between cellular cementum and bone? A) Cellular cementum has Haversian systems B) Cementocytes are arranged around blood vessels C) Cellular cementum lacks osteons and is not arranged around blood vessels D) Bone lacks incremental lines E) Cellular cementum is vascularized (ORAL BIOLOGY MIDTERM 2025)

---

19. How are dental radiographs useful in age estimation? A) They require minimal equipment B) They determine the dental chronologic age C) They measure bone density D) They predict lifespan (ORAL BIOLOGY MIDTERM 2025)

---

20. Osteoblasts laying new bone from inward to outward, cone name is: a. Filling cone b. Cutting cone c. Reversal cone (OB Mid Term BCQs)

---

21. Alveolar process is comprised of: a. Alveolar bone proper and supporting bone b. Cortical plate only c. Trabecular bone only (Ob mock dikiohs 2024)

---

22. Bone adjacent to periodontal ligament that contains a great number of Sharpey's fibers is known as: a. Lamina propria b. Haversian systems c. Bundle bone (Ob Midterm 2022)

---

23. Sharpey's fibers are attached at: a. Bundle bone b. Mantle dentin c. Enamel

---

24. Toward the DEJ the mineral content of dentine: a. Increases with the increase in mineral thickness b. Decreases with the increase in mineral thickness c. Increases with the decrease in mineral thickness (Ob Midterm 2022)

25. Which cells are numerous at the time of injury? a. Osteoclasts b. T lymphocytes c. Osteoblasts (Ob proffs 2025)

---

26. How do radiographs determine dental chronologic age? a. Bone density b. Root formation/calcification c. Calcification levels (ORAL BIOLOGY MIDTERM 2025)

---

27. Bone resorption is carried out by: a. Osteoblasts b. Osteoclasts c. Fibroblasts (OB Mid Term BCQs)

---

28. Alveolar bone proper is also known as: a. Cribriform plate b. Spongy bone c. Yellow marrow (Ob mock dikiohs 2024)

---

29. The mineral content of bone is primarily: a. Calcium Carbonate b. Hydroxyapatite crystals c. Magnesium Sulfate (OB Mid Term BCQs)

---

30. Remodeling involves: a. Only formation b. Only resorption c. Both formation and resorption (coupling) (ORAL BIOLOGY MIDTERM 2025)
