# Tutorial questions : Enamel

1.Why is enamel considered a unique tissue ? is enamel a biologically dead tissue as it is devoid of cells ? Why enamel has no cells ?

2.Briefly discuss methods of specimen preparation , how the slide of enamel can be made? Enlist steps of preparation of histological slide of dental hard tissues ?

3. How does thickness of enamel vary ?

4. What are the constituents of the organic matrix of enamel ?

2.Write at least five physical properties of enamel

3.why does young enamel appear whiter? Discuss optical properties of enamel?

4.What is the basic structural unit of enamel? What are enamel prisms made up of ? What is the biochemical composition of enamel ?

How does the direction of enamel prisms change with respect to the surface of enamel ?

5.Differentiate between surface and subsurface enamel? Why is surface enamel more resistant to acidic dissolution than subsurface enamel ? What is the biochemical difference between surface enamel and subsurface enamel ?

6.which three patterns of enamel prisms appears when viewed cross sectionally?

7.Expalin Hunter Schreger bands phenomenon , what are Parazone and Diazone? Why are Hu nter-Schregger considered a phenomenon ? Is it a permanent anatomical landmark ?

8.discuss different types of enamel Incremental lines? What are the names of weekly and daily incremental lines ? What are incremental lines on the surface of enamel called ?

9.Explain the difference in the number of striae in middle and cervical portion of enamel?

10.Define Perikymata discuss its features? What is the difference perikymata grooves and ridges ? Is it a positive anatomical landmark or negative ? Where is it frequently found and in which teeth ? What is the difference between perikymata and imbrication lines of Pickerel ?

What is the difference between cross striations and striae ?

Where are aprismatic enamel found ? Why is it called aprismatic enamel ?

11.How does loss of enamel occur?

12.Differentite between erosion, abrasion, and attrition

13. What is the mechanism of action of tooth whitening agents ?

13.Can enamel be repaired or regenerated ? Give examples .

How can enamel remineralized ? Is enamel remineralization an example of repair or regeneration ?

How is acid conditioning and micro porosity of enamel beneficial in establishing a bond between enamel and dental materials ?

14.Briefly describe the boundary between enamel and dentine, discuss its features?

15.What are Enamel spindles, how much they extend into enamel?

16.which feature of enamel appears like tufts of grass? Define

17.What are Enamel Lamellae? How they can best be visualized?

18.What are the effects of Porosity on enamel, discuss Micro porosity of enamel?

19.Age changes in enamel? What happens to enamel with age ?

20. write about the junction between cementum and enamel?

21. What are Enamel Pearls? Where are they usually found?

22. List the features of enamel that are pertinent to the progress of dental caries ?
