# CARDIOVASCULAR SYSTEM OSPE

## DAY 1

# IMPORTANT INSTRUCTIONS

- WRITE YOUR NAME, ROLL NUMBER, AND DATE (IN CASE YOU ARE USING MORE THAN ONE SHEET, WRITE THE SAME ON THE OTHER SHEET).
- PLACE ID CARDS AT THE CORNERS OF YOUR DESK FOR EASE OF VERIFICATION.
- PLEASE DON’T LEAVE THE HALL WITHOUT MARKING YOUR ATTENDANCE.
- MAKE SURE TO SUBMIT YOUR PRACTICAL JOURNALS IN POWERLAB AS SOON AS YOU ARE DONE WITH OSPE.

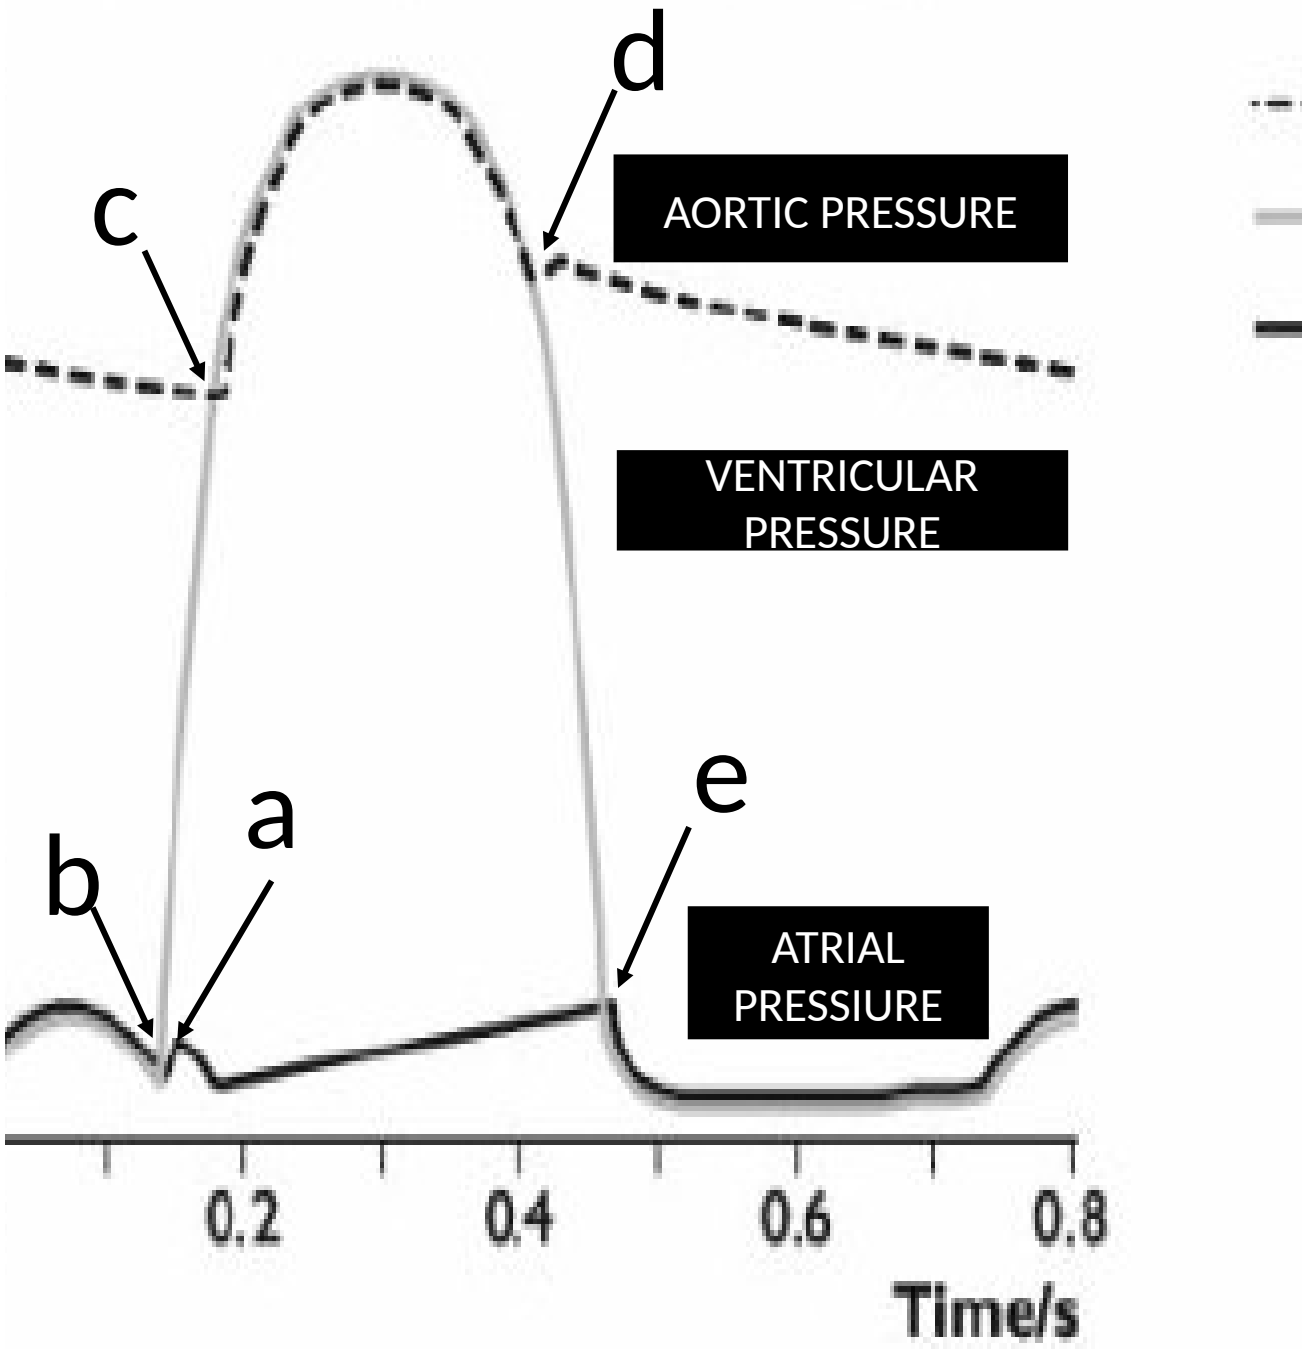

# SPOT NO.1

1. Diagnose the abnormality present in this ECG
2. Calculate the approx. heart rate of the given ECG strip
3. Why is there a delay as the electrical impulse passes through AV node?

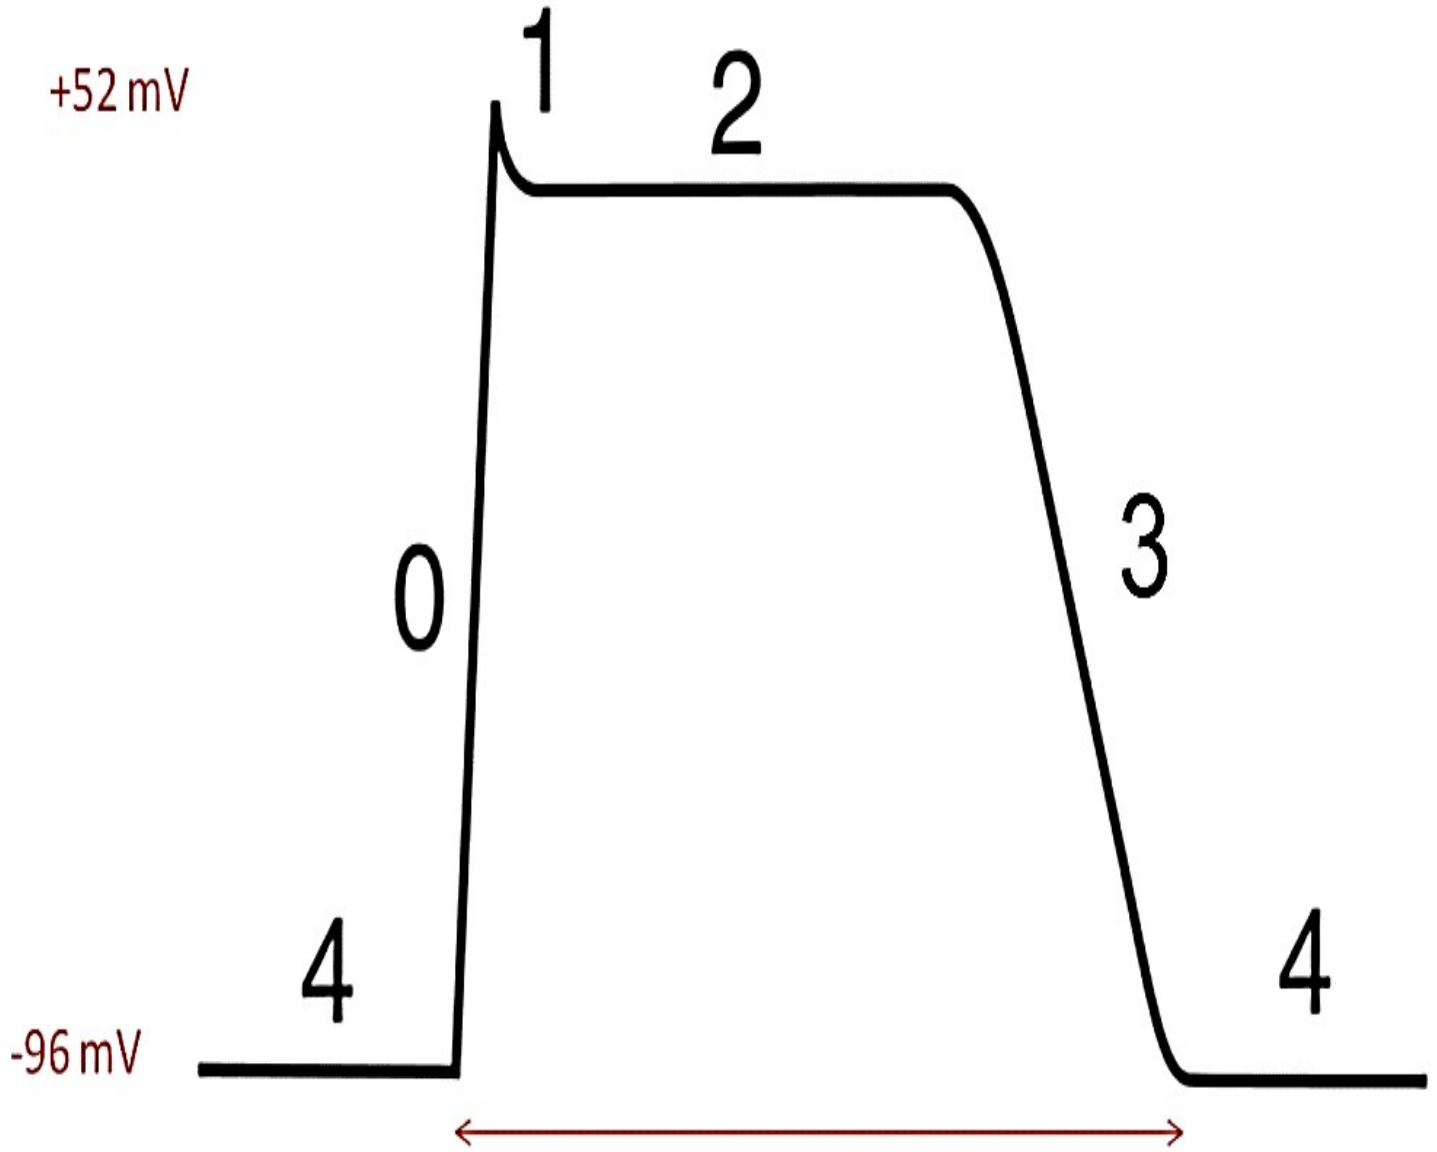

# SPOT NO.2

1. Between which two points lie isovolumetric relaxation?
2. At which point in the cardiac cycle does mitral valve close?
3. Identify wave “a” in the lowermost line. What is the reason for this wave?

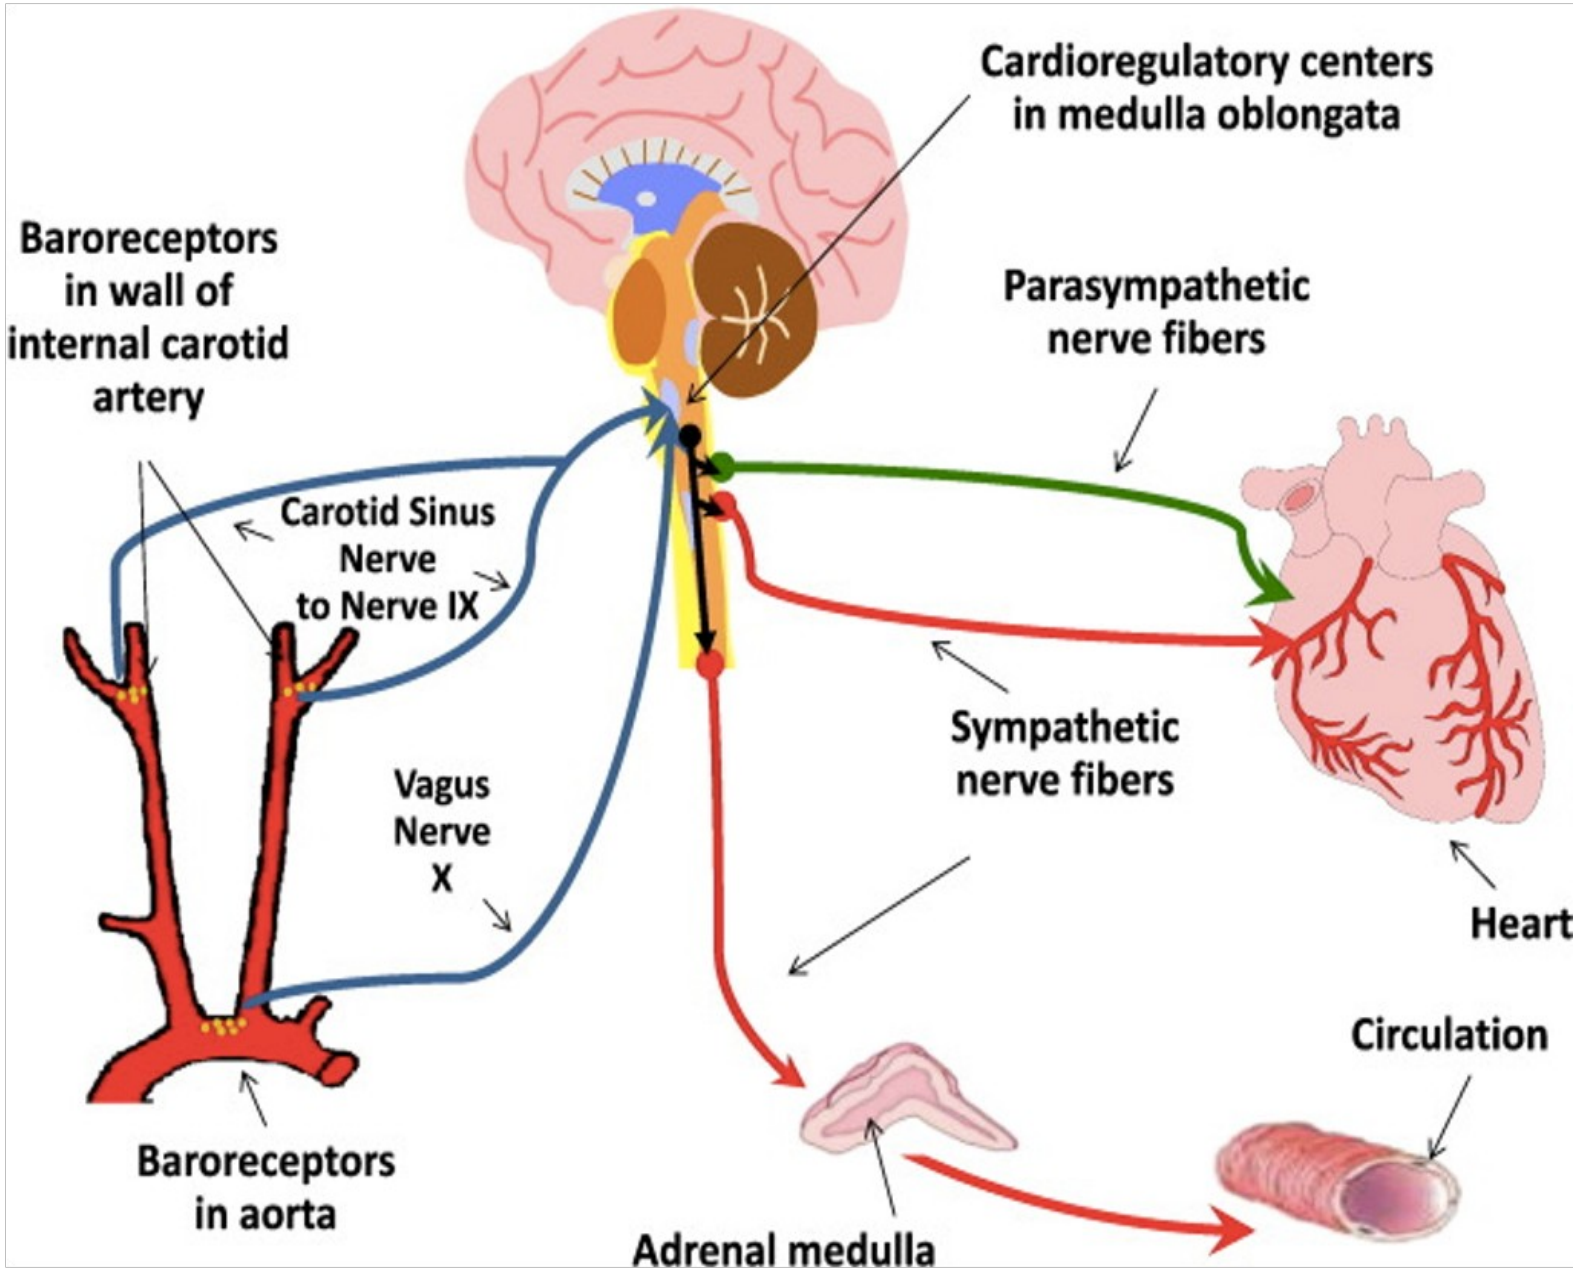

# SPOT NO.3

1. Identify the action potential
2. Why doesn't the cardiac muscle fatigue?
3. '3' is represented on the ECG by which wave

# SPOT NO.4

1. Identify the reflex
2. Where is the vasomotor center located?
3. What happens if the blood pressure ↓es?

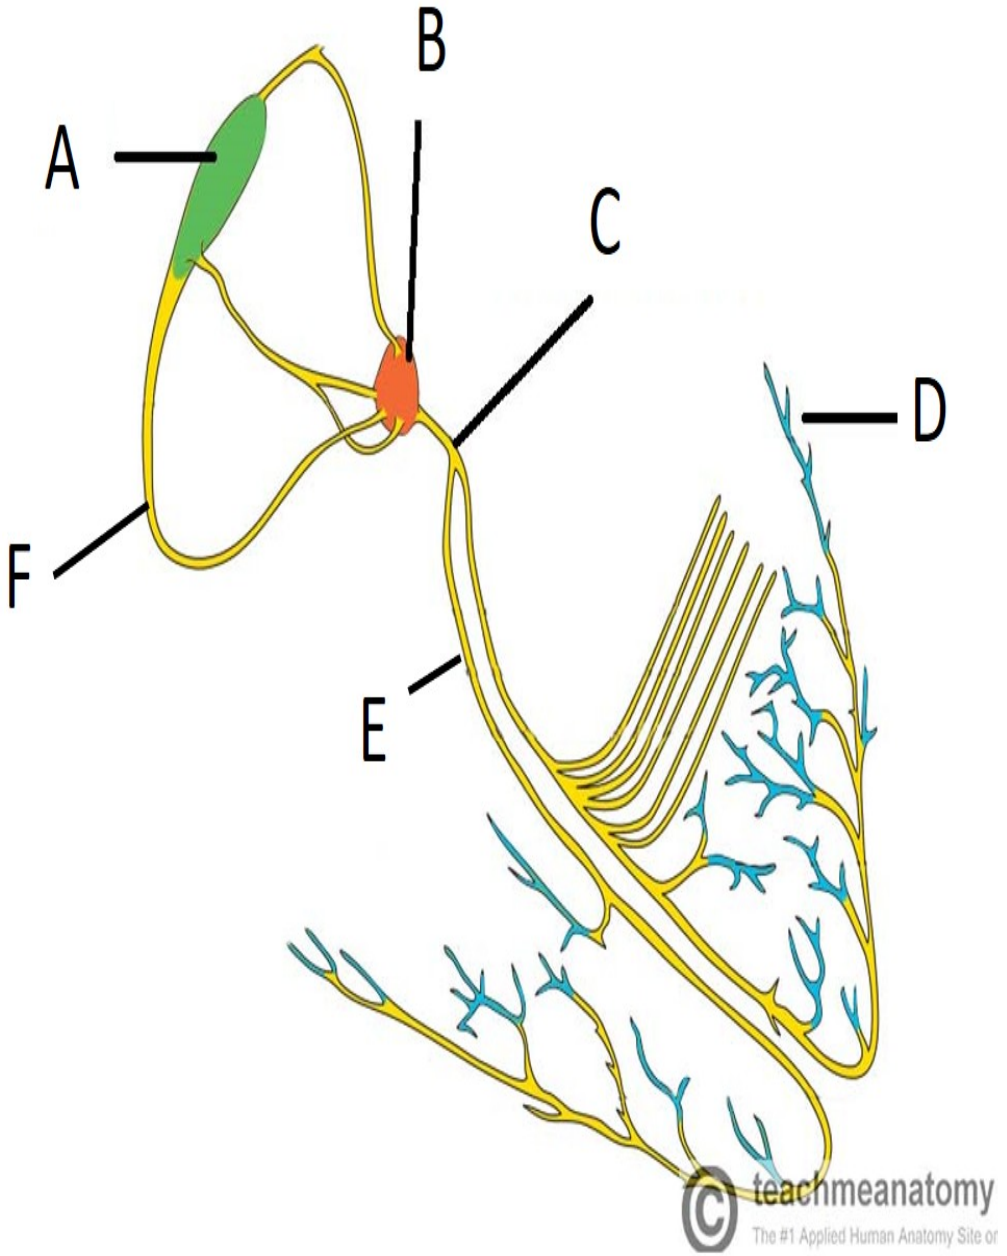

## SPOT NO.5

1. What are the methods by which blood pressure is measured?
2. What is the name of sound auscultated and why is it produced?
3. Write down the formula for mean arterial blood pressure

# SPOT NO.6

1. Identify A, B, C, D, E & F
2. What is the intrinsic frequency of action potential at SA node, AV node and Purkinje fibers?
3. Name one condition each causing increase and decrease dromotropic effect on the heart?

# SPOT NO.7

1. Identify the phases of cardiac cycle → 1, 2, 3, 4, & 5
2. If the heart rate is 72 beats/min, what is the duration of cardiac cycle?
3. In which phase of cardiac cycle is the 2nd heart sound heard?
