

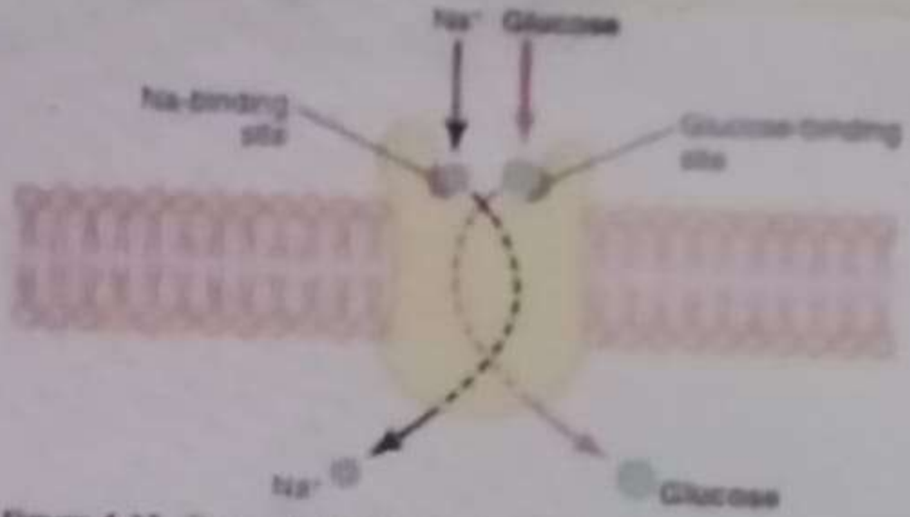

Figure 4-13. The postulated mechanism for sodium co-transport of glucose.

(a) What is the process being shown above?

(b) Which substance is going downhill and which uphill?

(c) What are the names of such transporters?

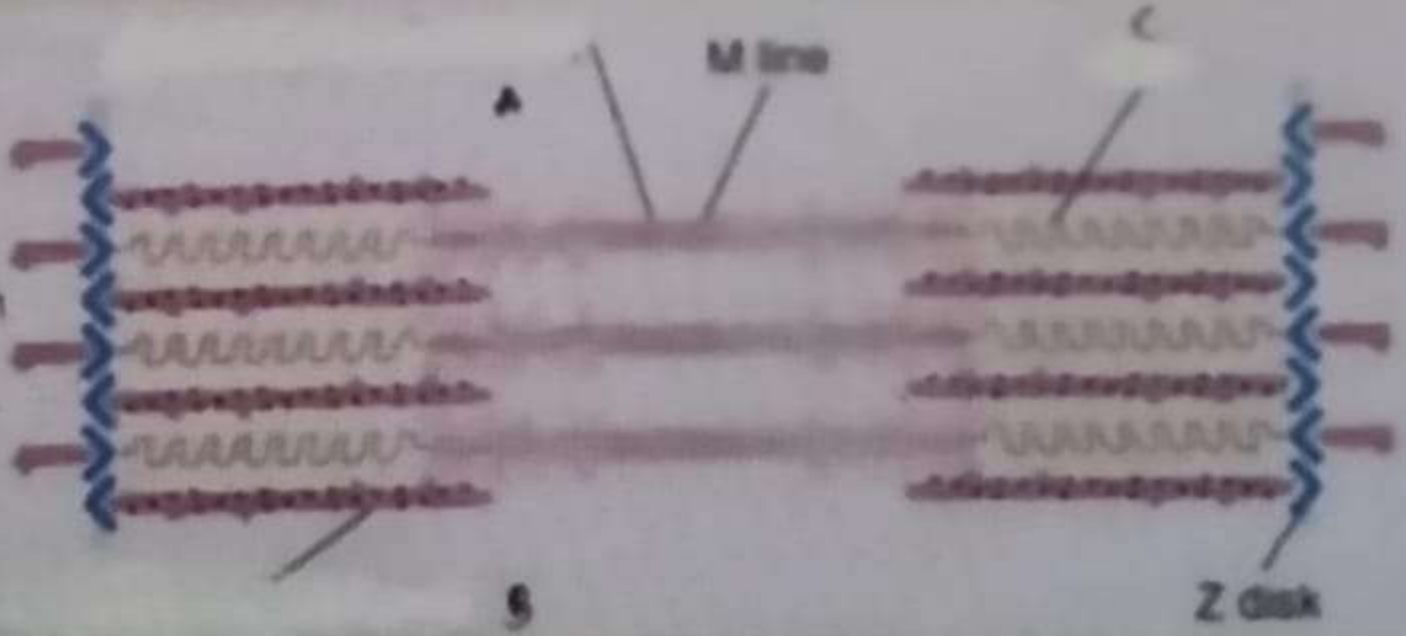

(d) Where are they found?

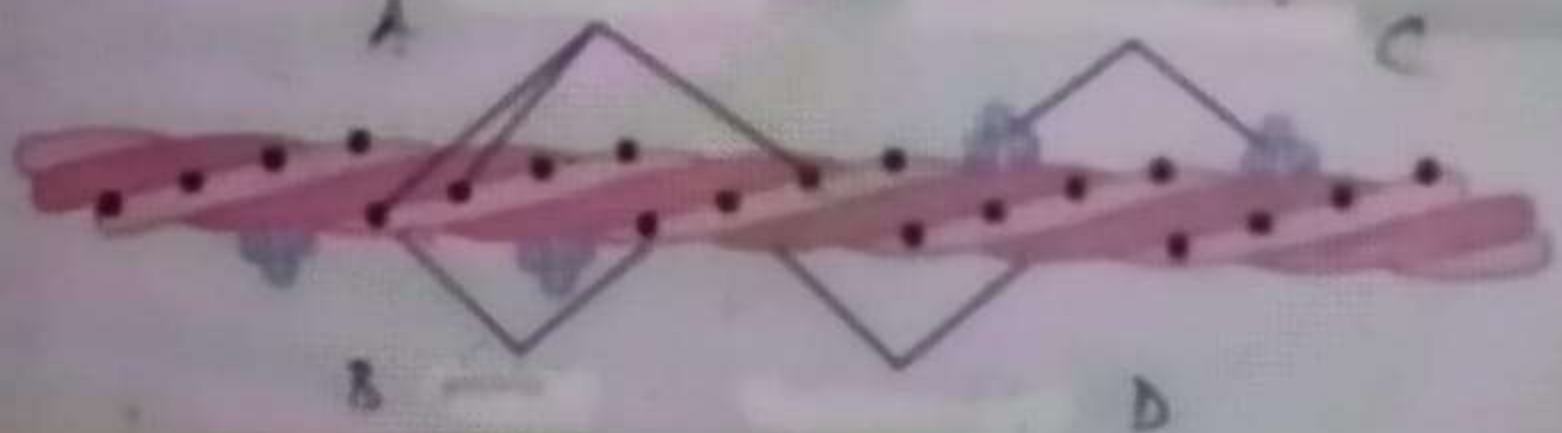

(Hint: just taught in neural module)

Dorsiflexion
Plantar flexion

(a) Label 'A', 'B' and 'C'

(B) What is this diagram called?

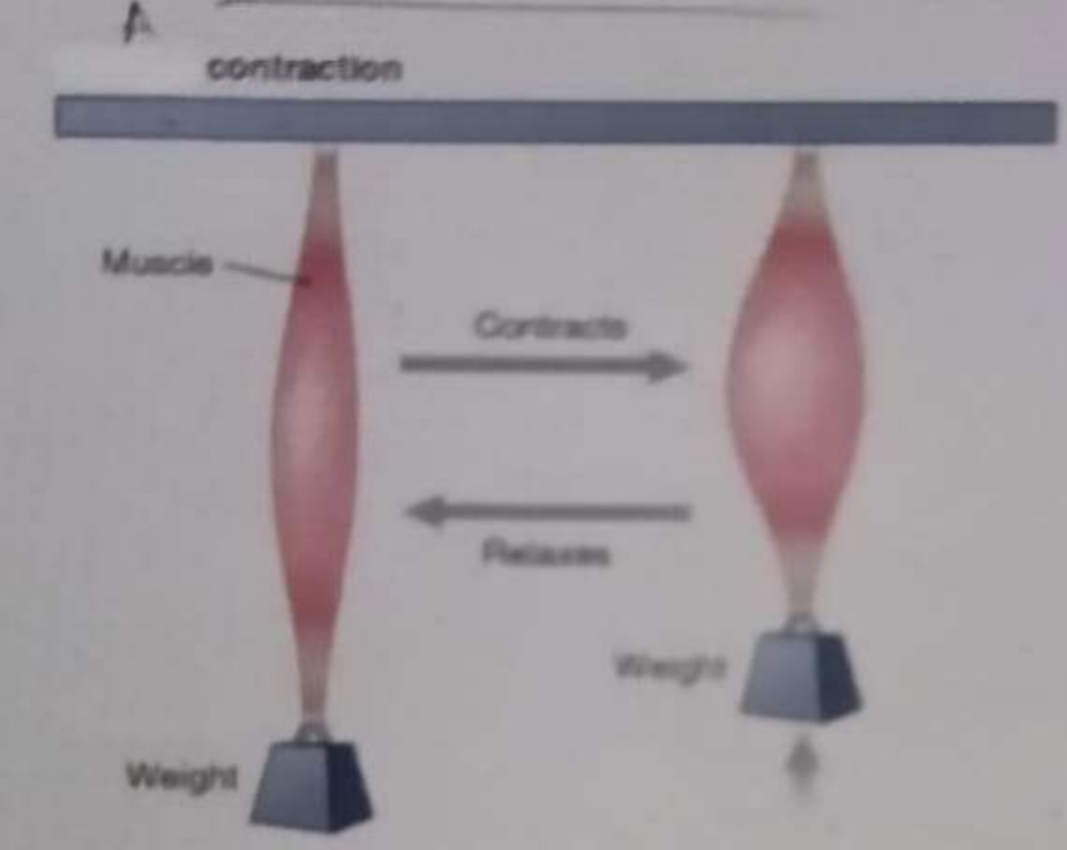

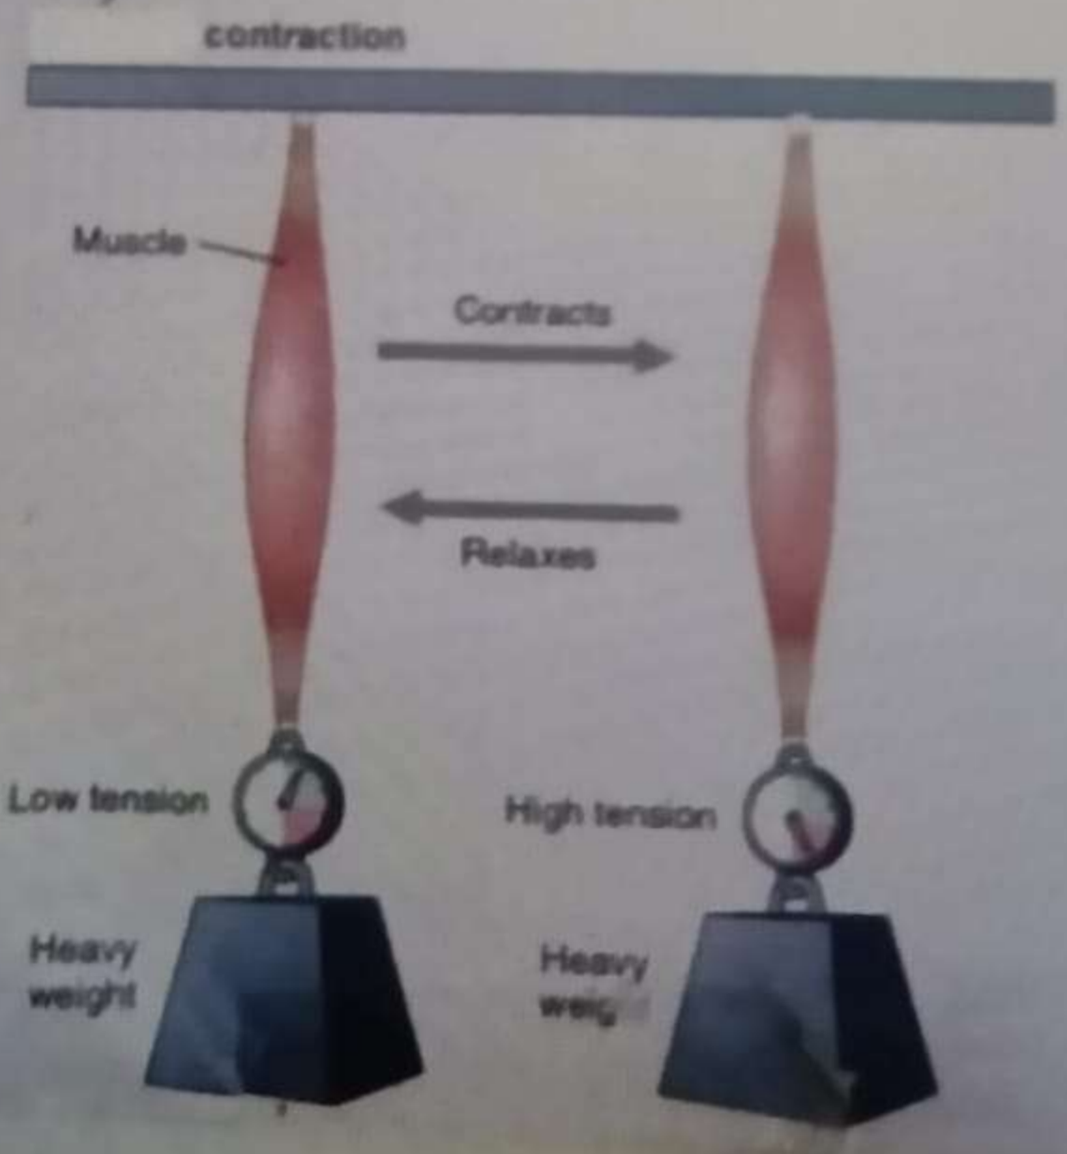

a) Label A, B, C and D.

b) What enzyme do you check in Myocardial Infarction.

Name the type of muscular contraction, A and B.

Cardiac cycle = 0.8 sec

0.8 A

Thalamus
Claustrum

Depolarization

Initial repolarization → Plateau → Rapid repolarization

OSPE

(a.) What does P, Q, R, S and T represent

(b.) label the pathology X, Y and Z

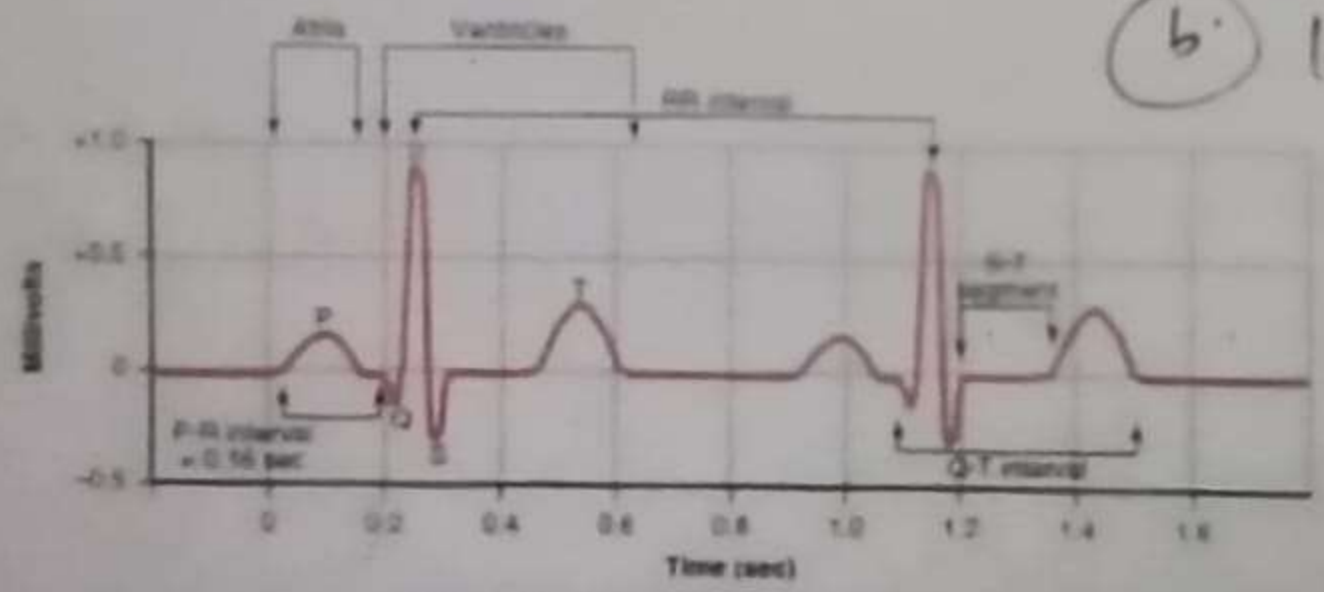

Figure 11-1. Normal electrocardiogram

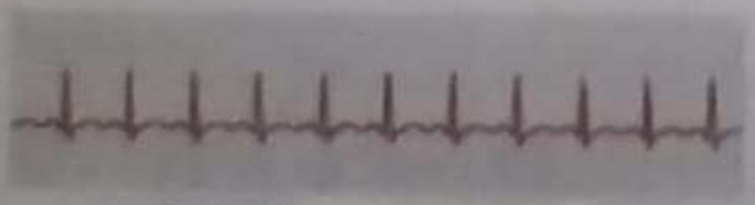

Figure 13-1

X

Figure 13-2

Y

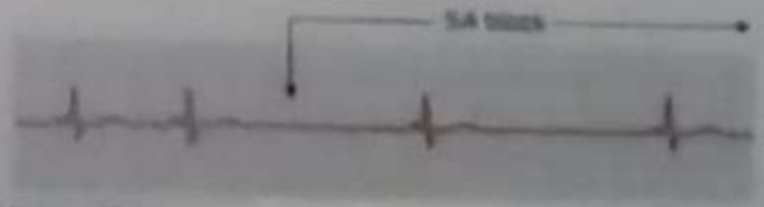

Figure 13-6

Z

sudden cessation of P waves with resultant standstill of the atria. However, the ventricles pick up a new rhythm, with the impulse usually originating spontaneously in the atrioventricular (A-V) node, so the rate of the ventricular QRS-T complex is slowed but not otherwise abnor-

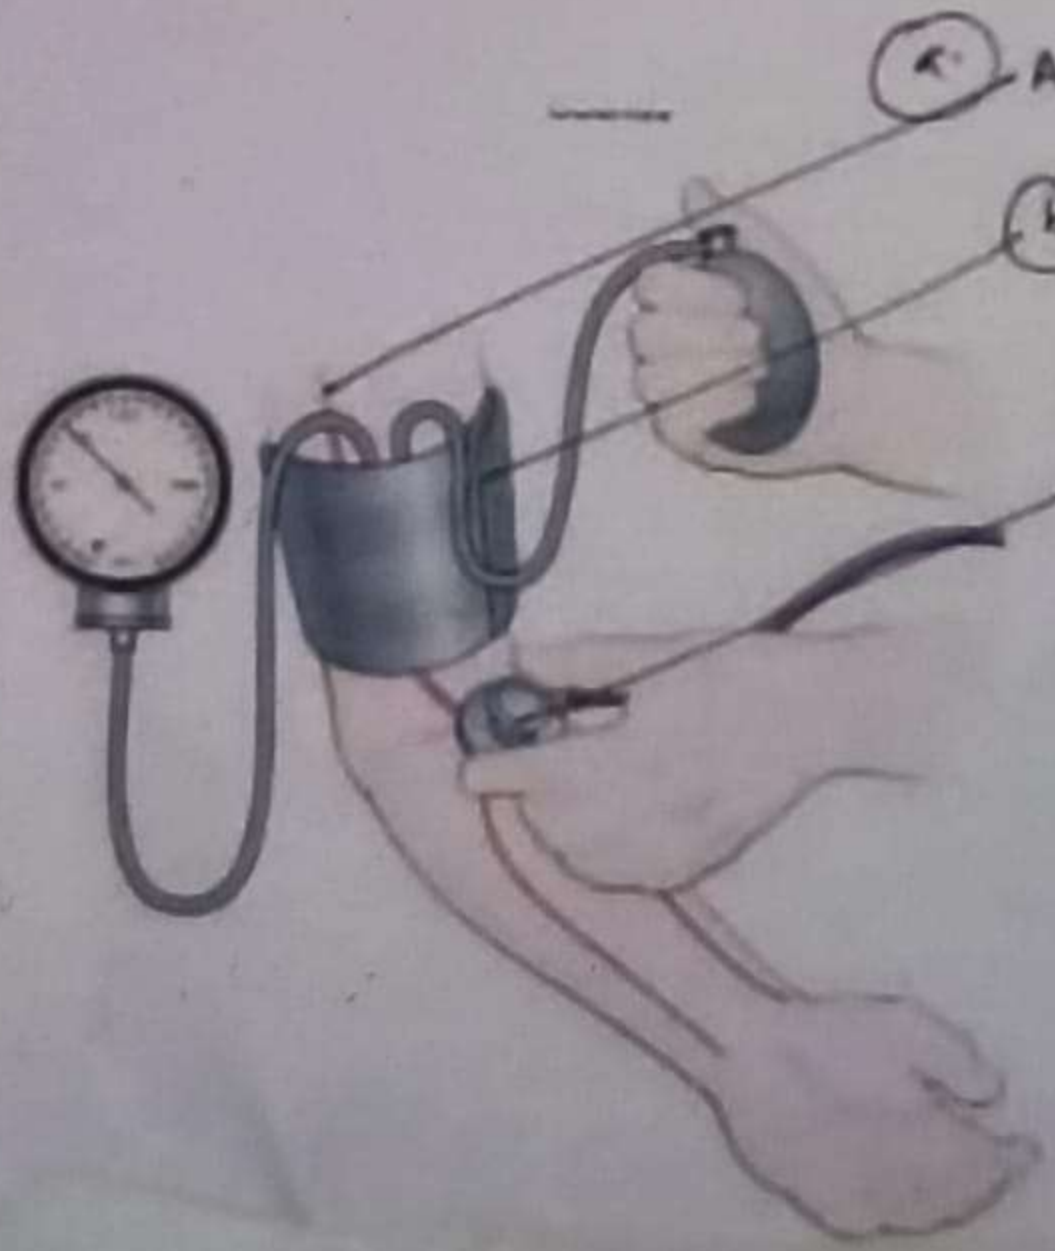

(a) What is the reading in test tube A?

(b) What does this value represent in blood? and what is it called

(c) B is called what?

(d) C is called what?

a. A: Name of Arm 'A'

b. B: Name instrument 'B'.

c. C: Name instrument 'C'

d. What is the normal value of BP.

e. What is this method of taking BP called.

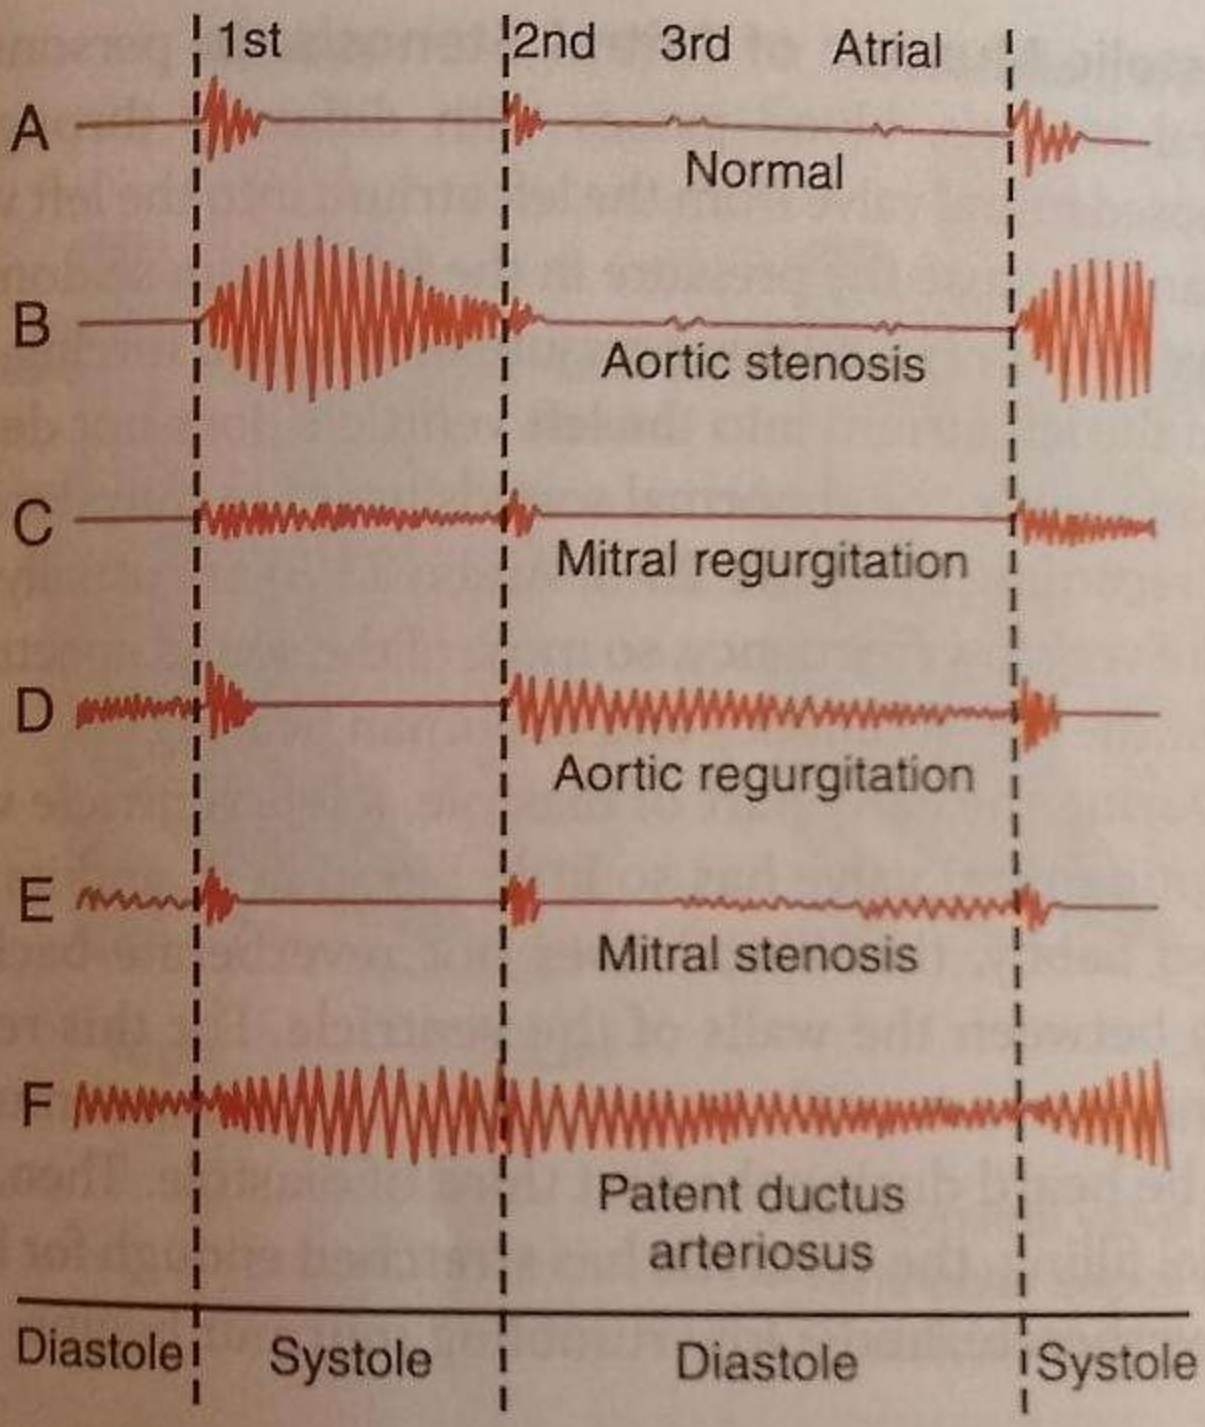

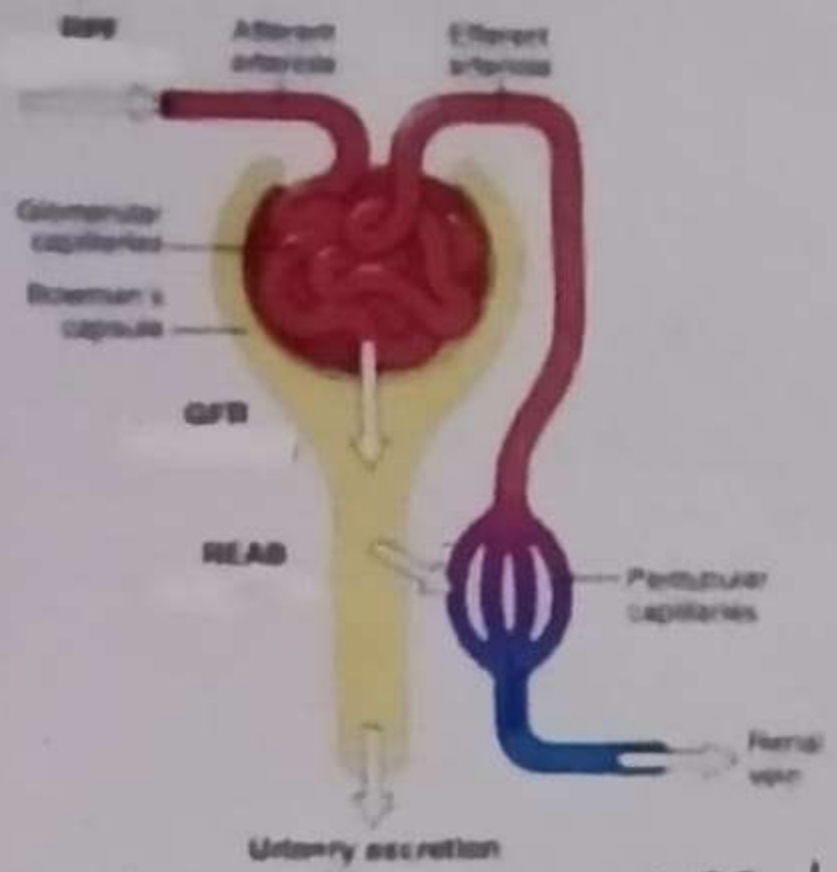

Figure 23-3 A—F, Phonocardiograms from normal and abnormal hearts.

a) What is the normal GFR / day.

b) Write the flow rates of RPF, GFR, REAB and urinary excretion

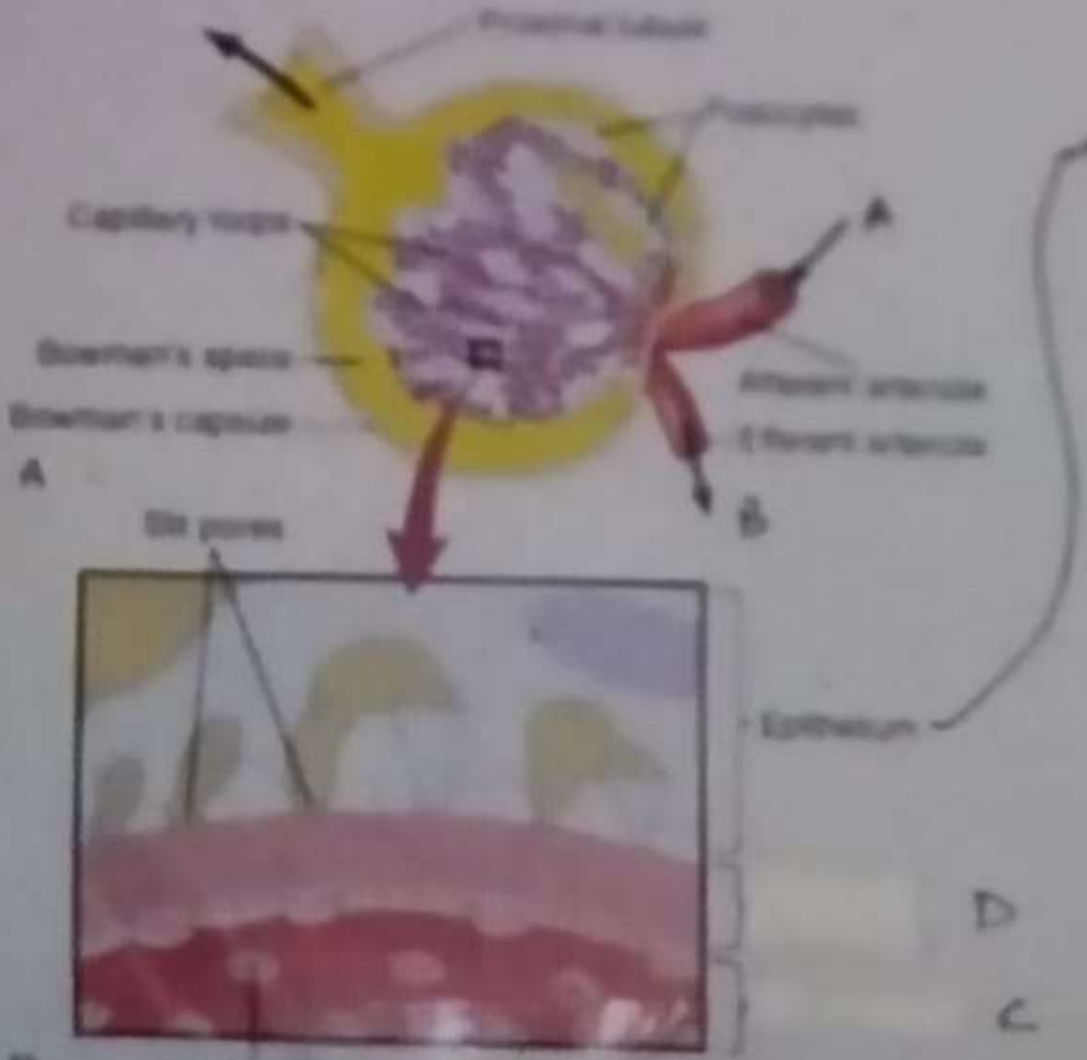

c) Also write full forms of RPF, GFR, REAB.

(a) Label A, B, C and D

(b) What is ultrafiltration made of

(c) How much fluid is absorbed in proximal tubule?

(d) What is absorbed 100% in proximal tubule

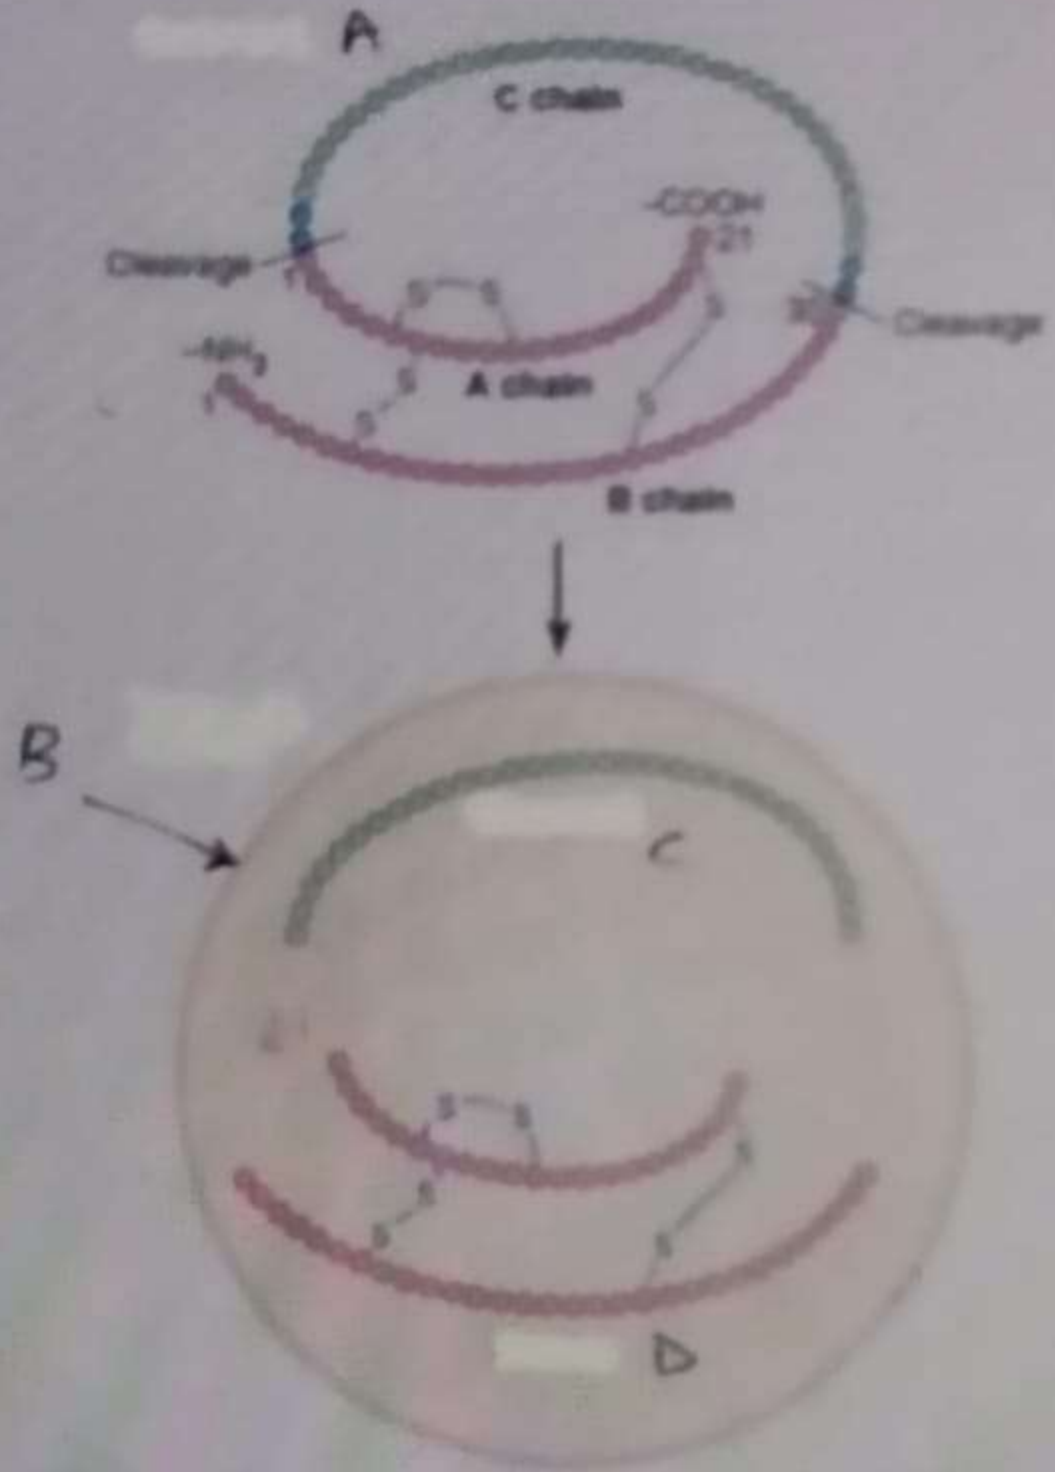

Figure 79-2 A schematic of the human proinsulin molecule, which is cleaved in the Golgi apparatus of the pancreatic beta cells to form connecting peptide (C peptide), and insulin, which is composed of the A and B chains connected by disulfide bonds. The C peptide and insulin are packaged in granules and secreted in equimolar amounts, along with a small amount of proinsulin.

(a) Name ;

A

B

C

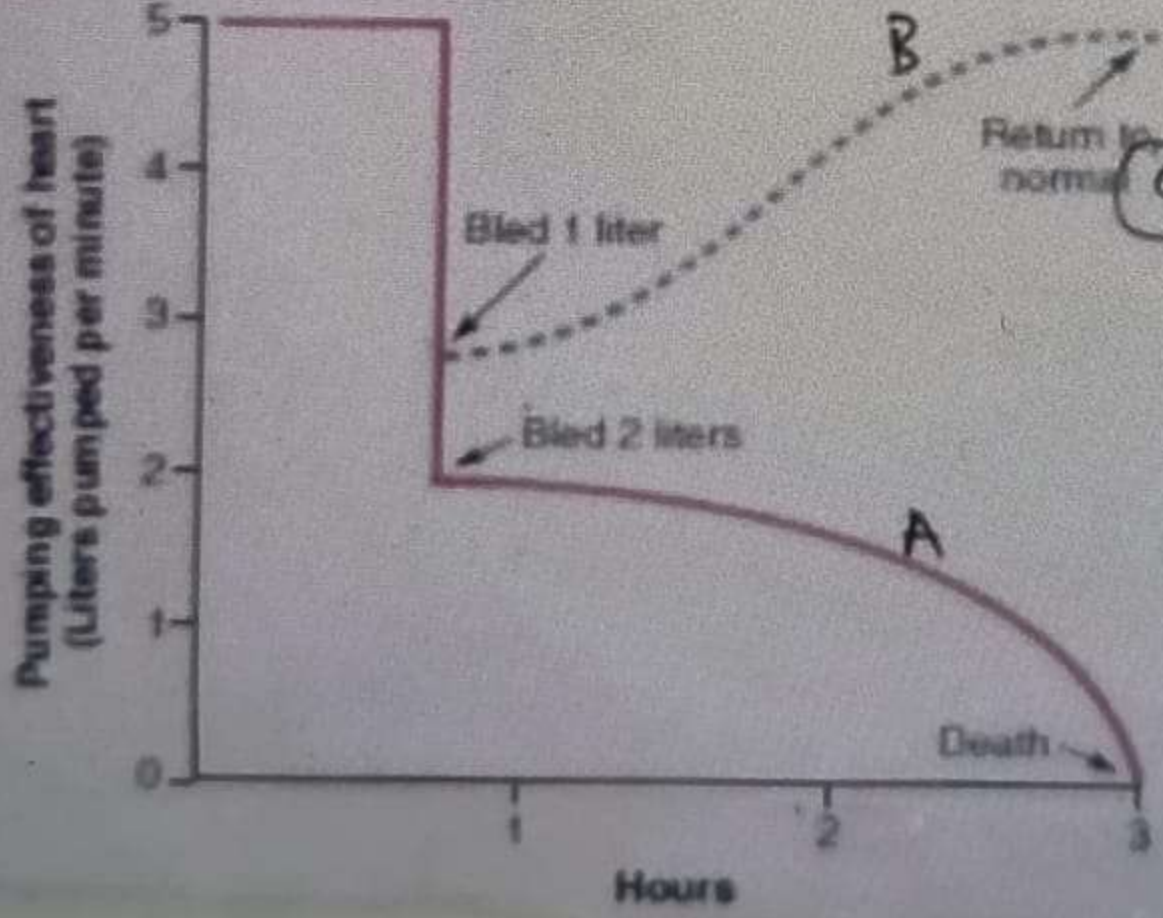

D

(b) In which organ does this cleavage take place

(c) In which organelle of the organ which you have stated above cleavage takes place.

(a.) A is an example of what?

(b.) B is an example of what?

(c.) Name other examples where 'B' is seen

↑ Heart strength
↑ Respiration

↑ Glucose absorption
↑ Gluconeogenesis
↑ Glycogenolysis
↑ Lipolysis
↑ Protein synthesis
↑ BMR

Figure 80-2. Hypocalcemic tetany in the hand, called carpopedal

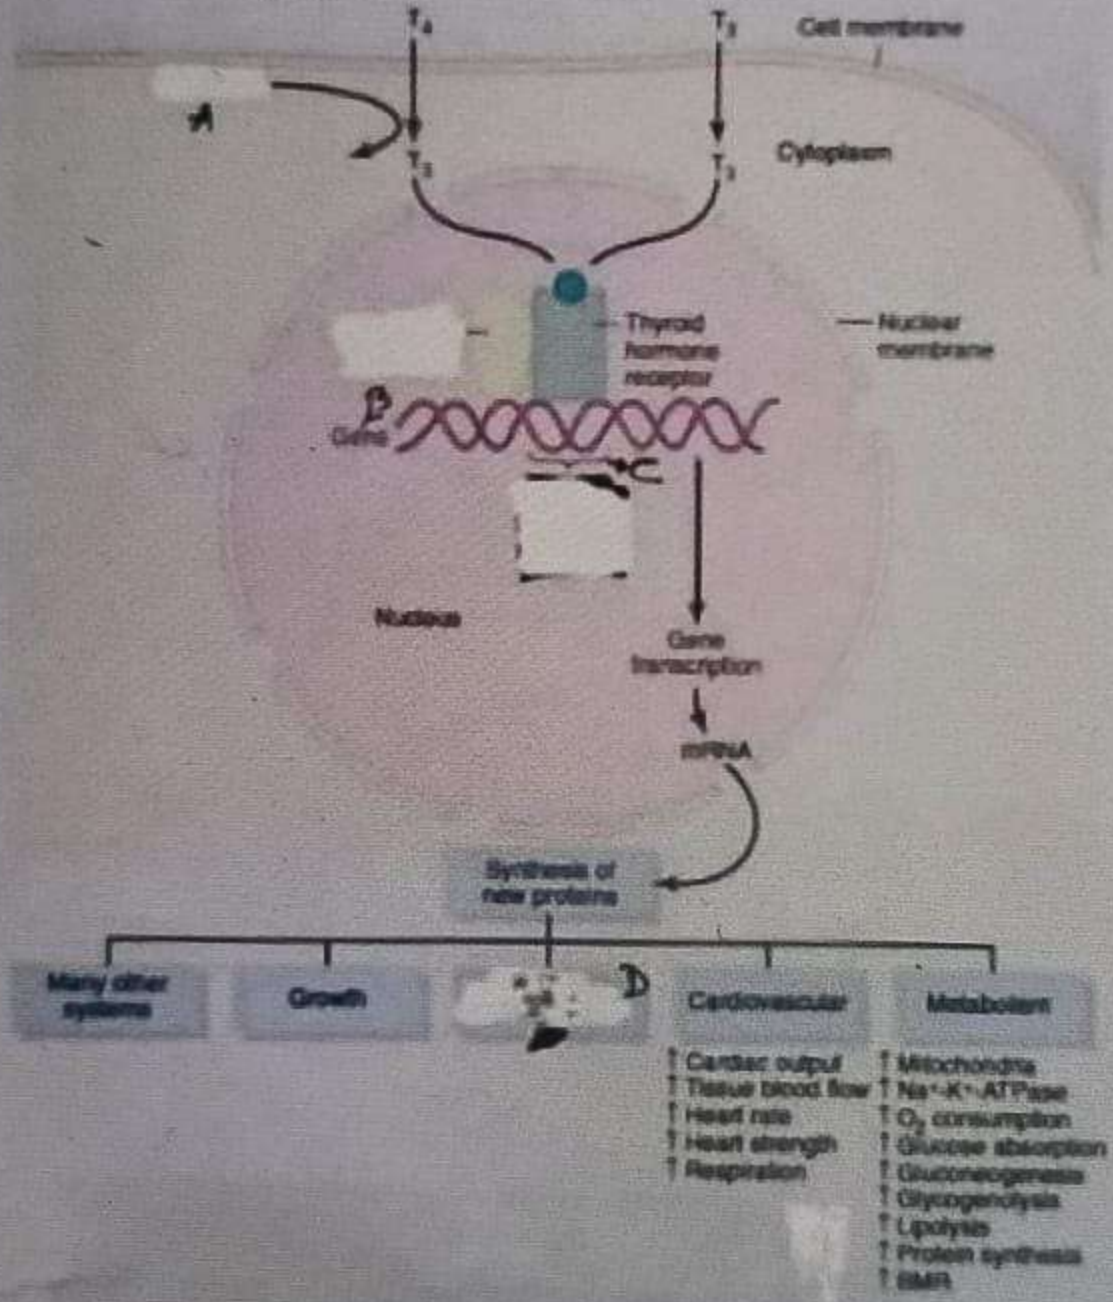

(e.) This abnormality is due to pathology of- which gland or organ of body?

(a) Name the enzyme 'A'.

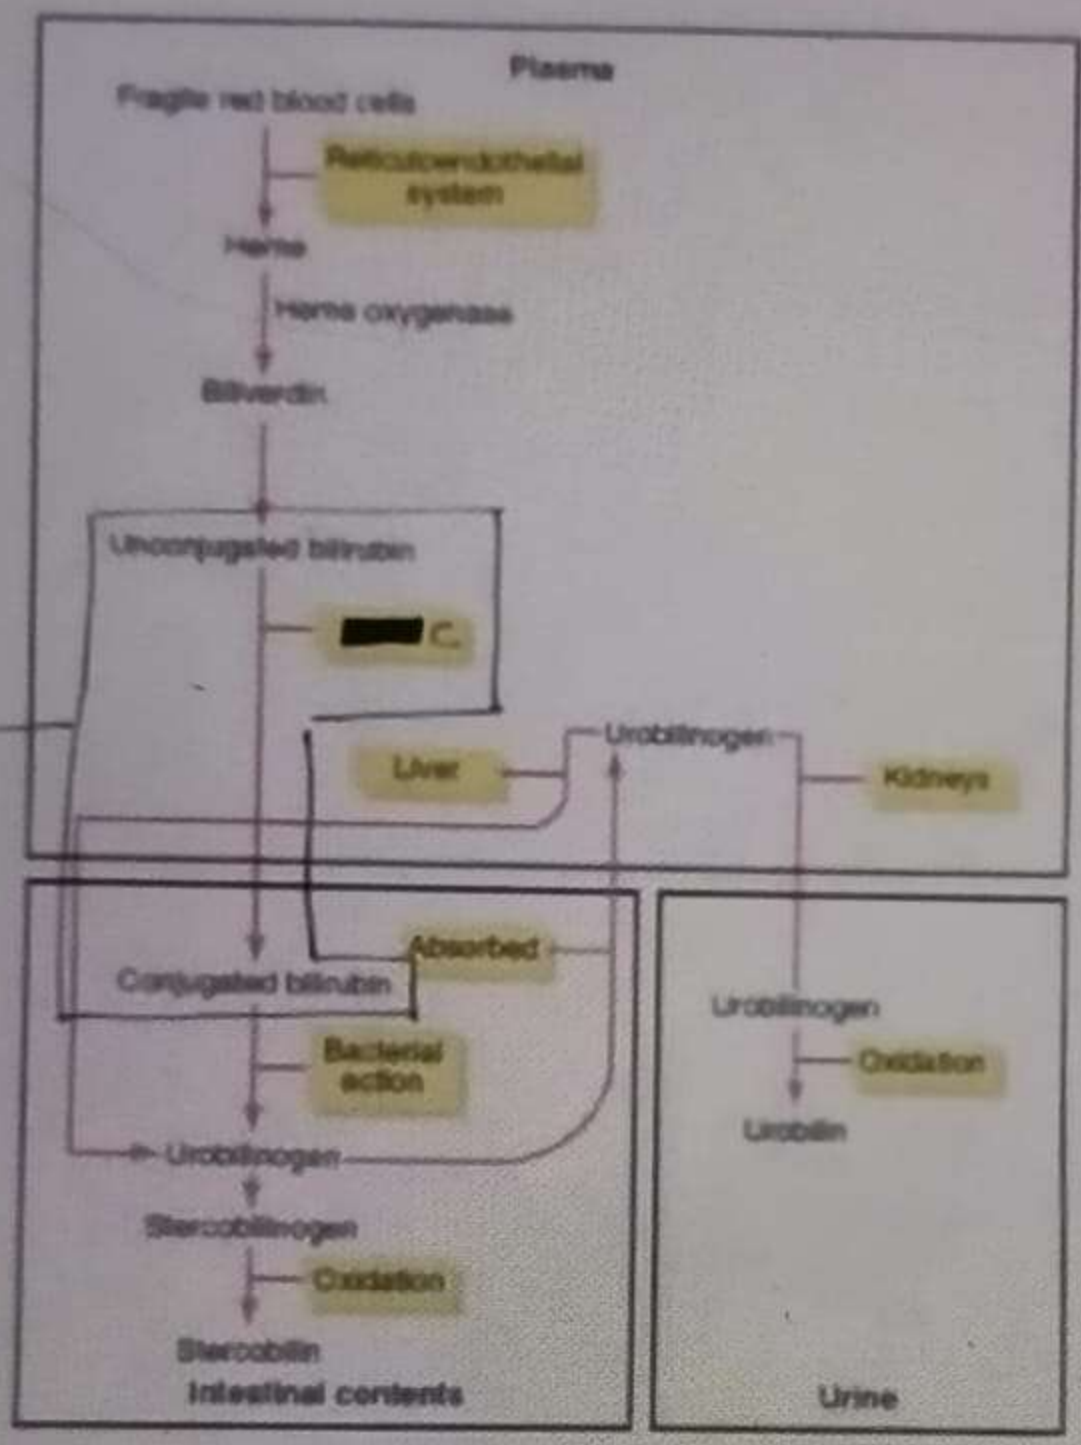

(b) Name 'B' (Hint :- re ua phor)

(c) Name part 'C' located on the gene.

(d) What is 'D'?

NEGATIVE FEEDBACK MECHANISM	POSITIVE FEEDBACK MECHANISM
In this product feeds back to decrease its production.	In this,product feeds back to increase its production.
It is a common form of mechanism.	It is a rare or uncommon mechanism.
It is associated with maintaining homeostasis.	It breakdown the homeostasis of he body.
The response is opposite to the original stimulus.	Response is same to the original stimulus or stimulus is promoted.

Obesity

Obesity can be defined as an excess of body fat. A surrogate marker for body fat content is the body mass index (BMI), which is calculated as:

[redacted]

a) Write down the formula for calculating BMI

b) What are the units of BMI, weight and height

c) Name the organ "C" in which the boxed process is taking place, what is the name of this process?

9:19 56

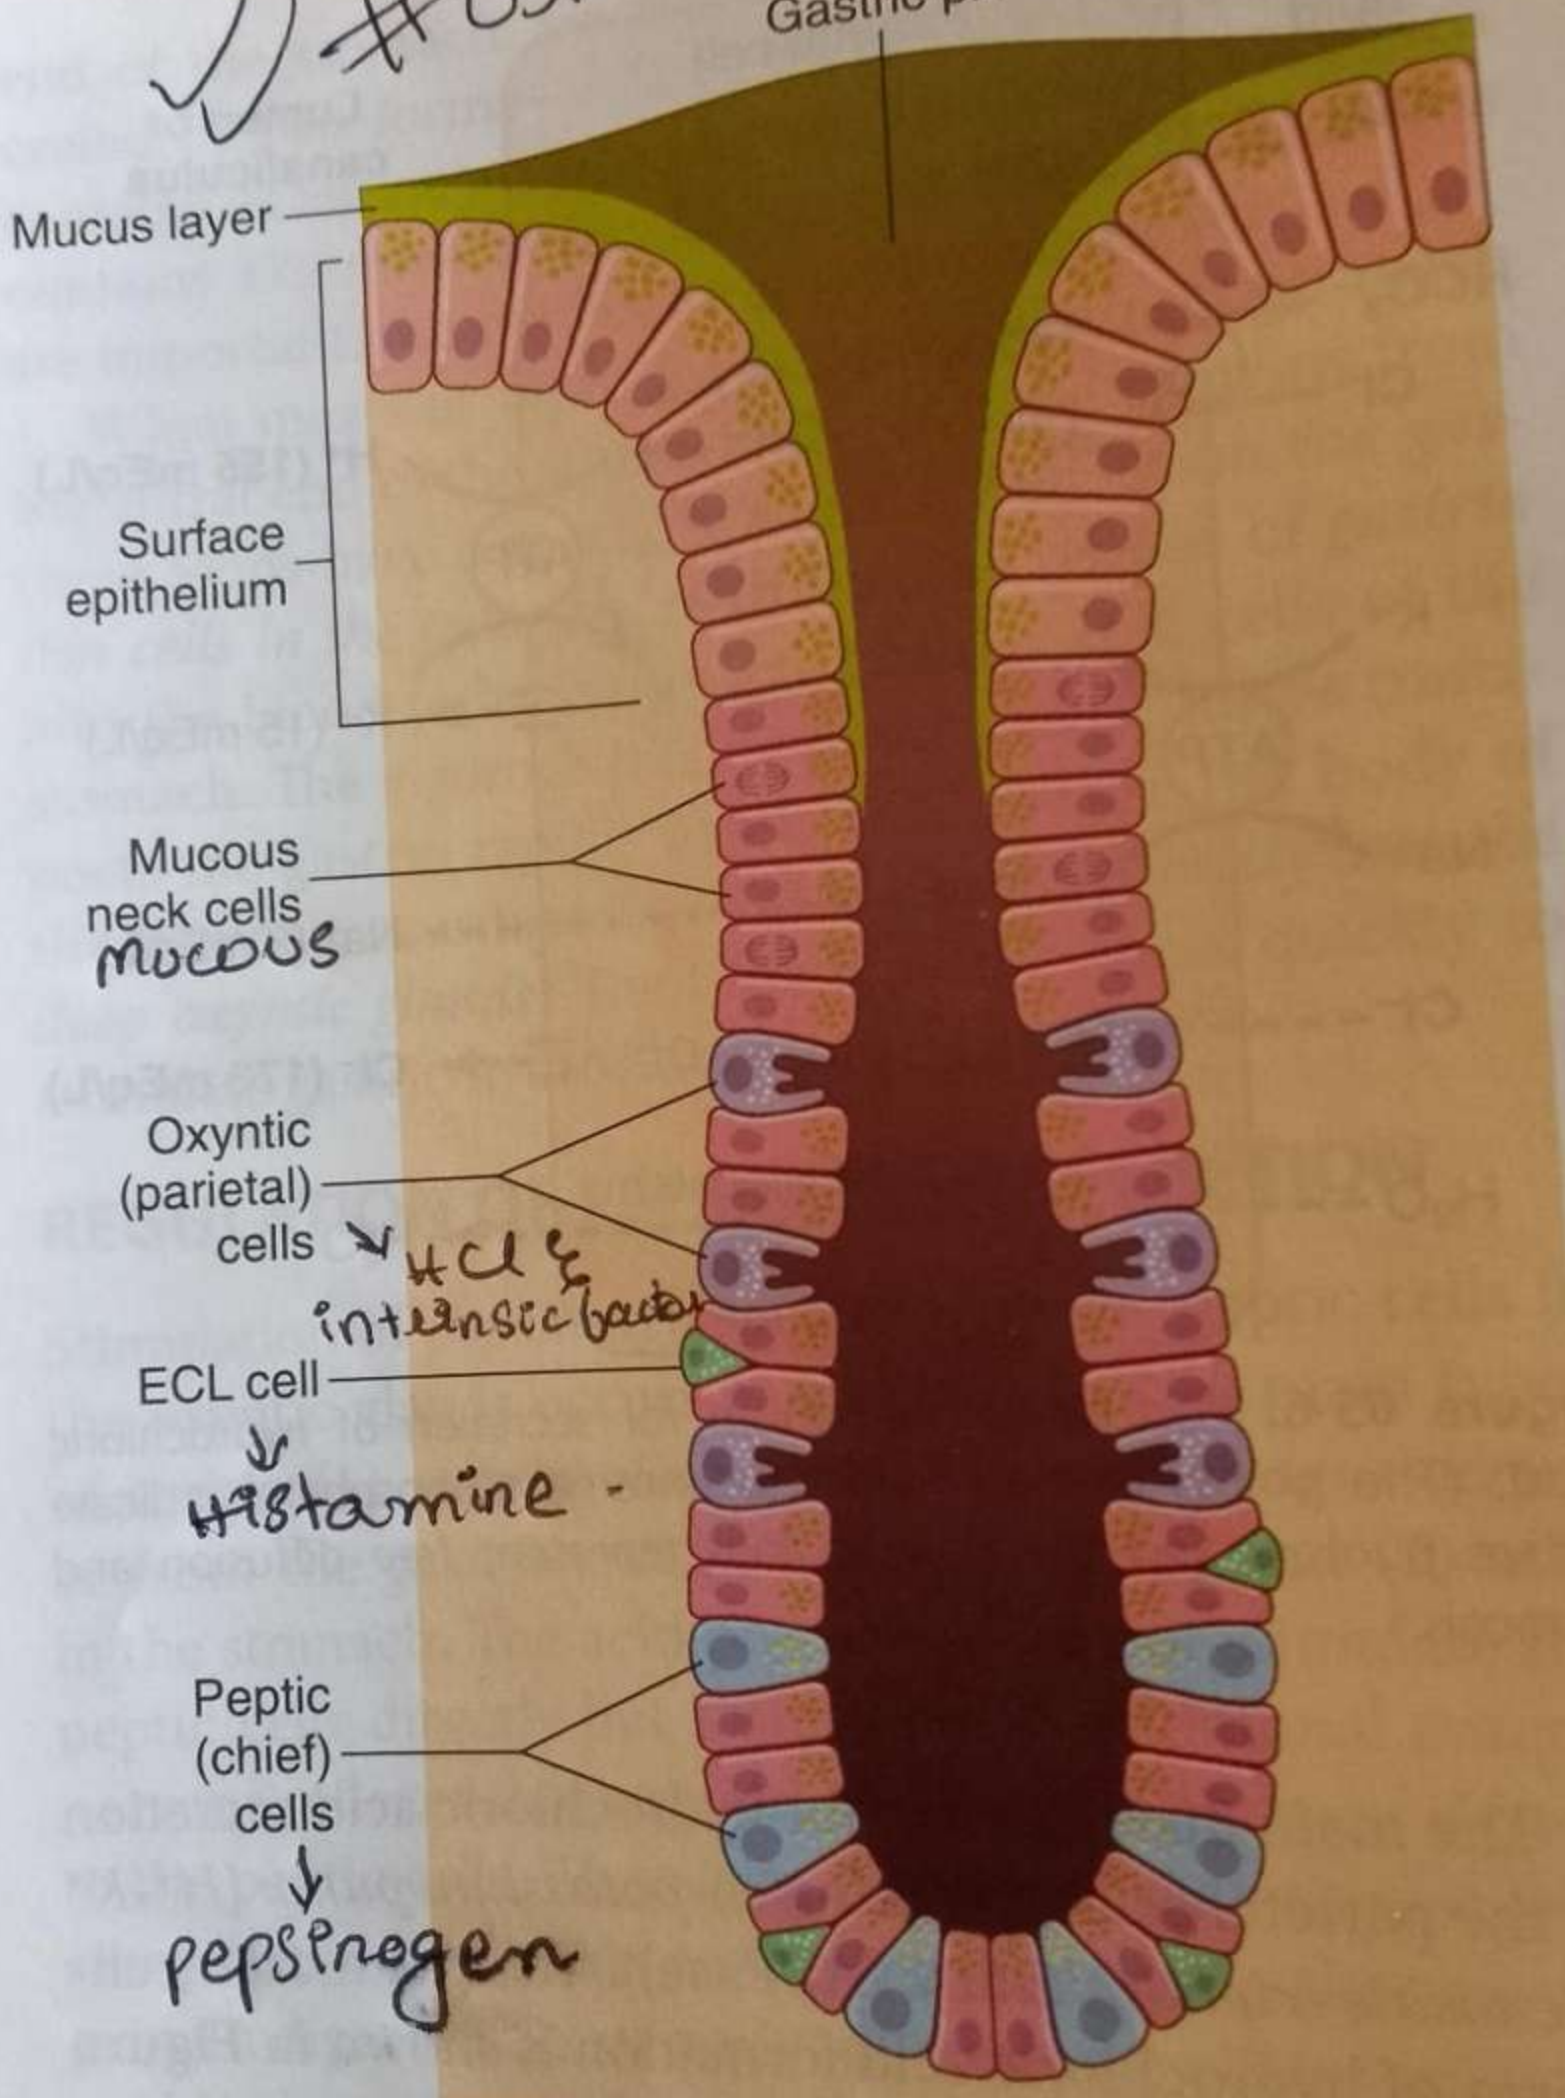

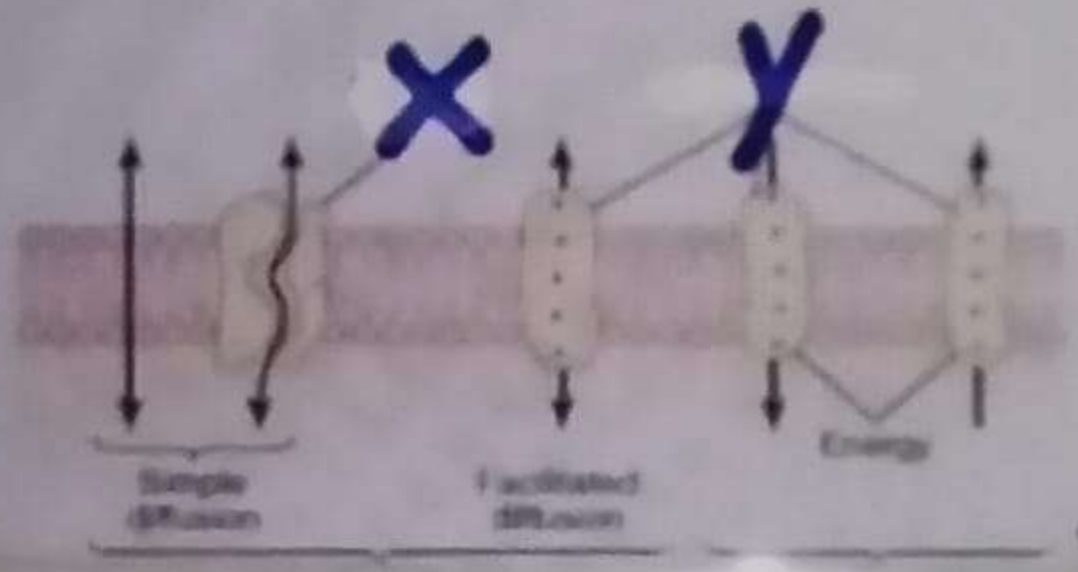

Figure 65-4. Gastric (oxyntic) gland from the body of the stomach. ECL, Enterochromaffin-like cells.

Oxyntic gland – HCl, intrinsic factor, pepsinogen

Pylaric gland – Gastrin > Mucus

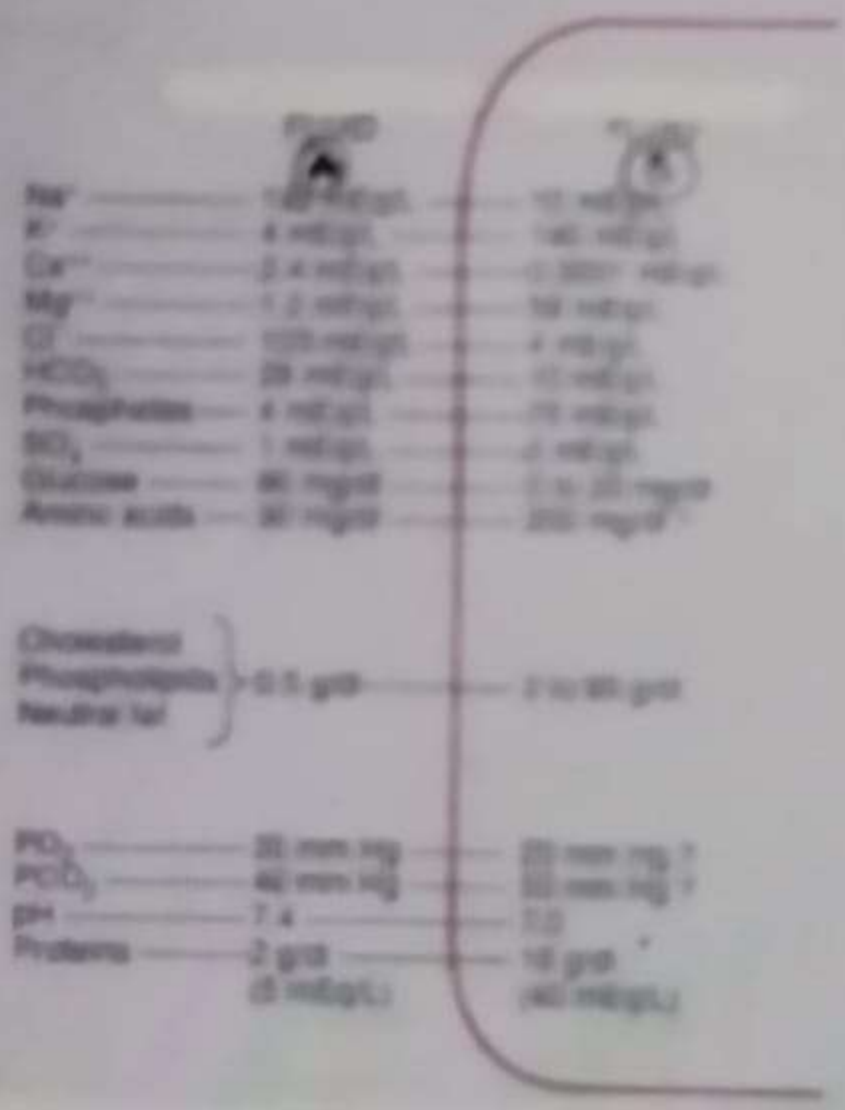

(a) What is A.

(b) What is process B

(c) Energy is supplied in what form for protein B

(d) Name the types of proteins X and Y.

a) Name fluid A and B

b) Which compartment is more acidic A or B.

c) Which ion in the list acts as an intracellular buffer.

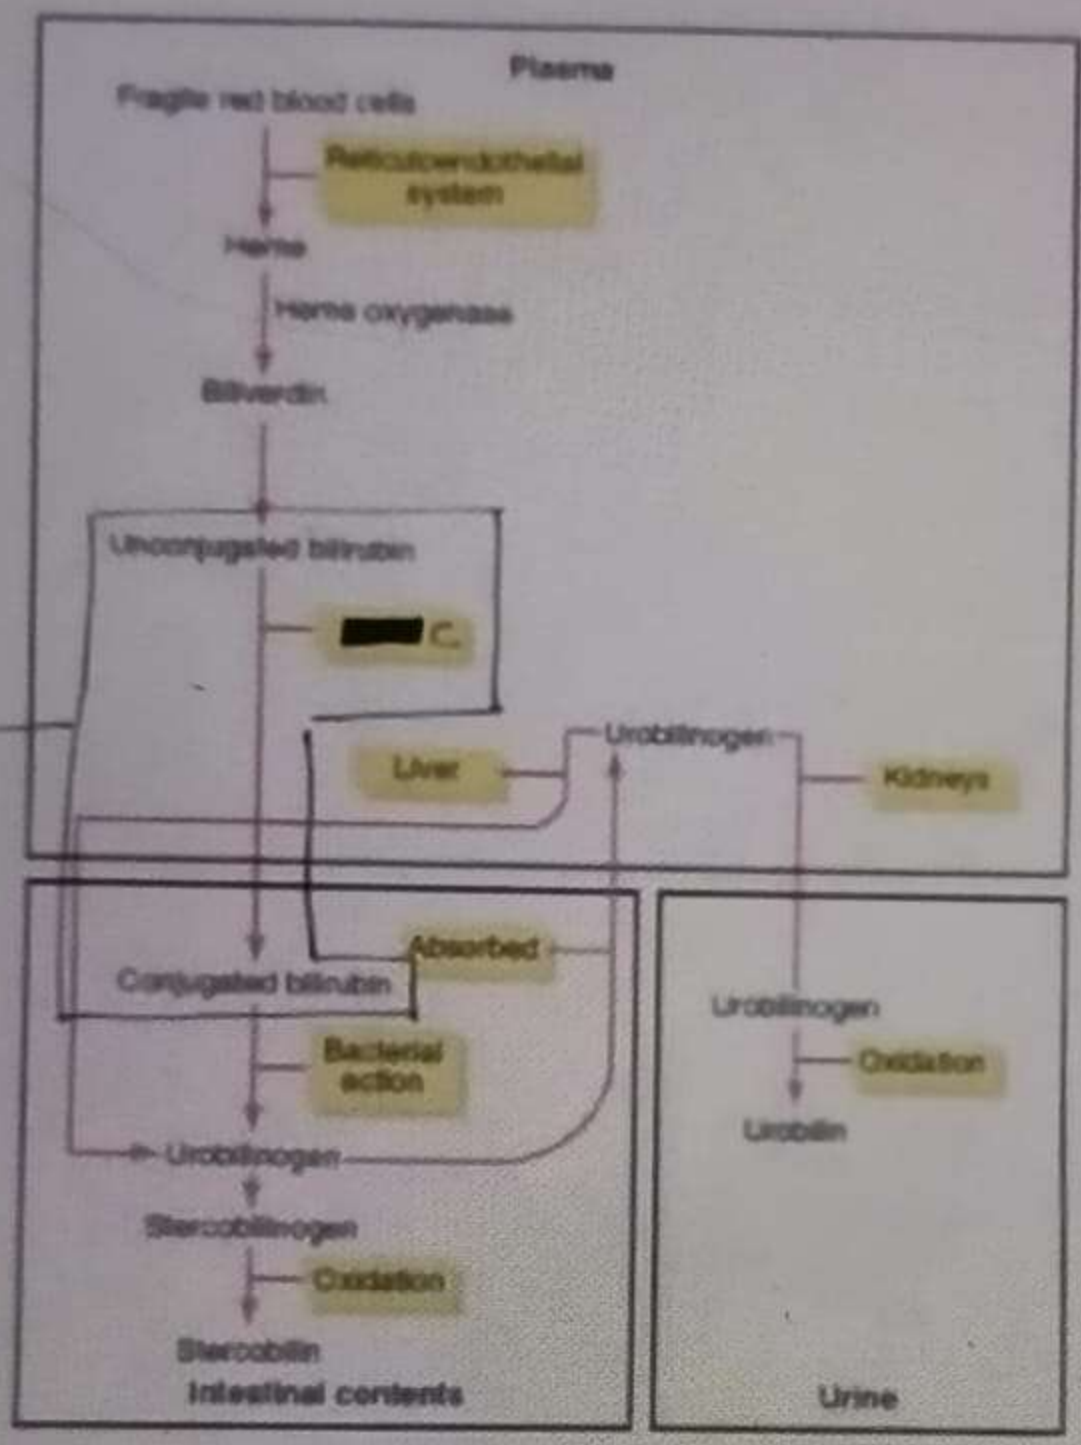

a) What is her appearance called, (Hint:- look at her eyes)

b) What is she suffering from?

c) How will her BMR be? What is full form of BMR?

[redacted]

Obesity

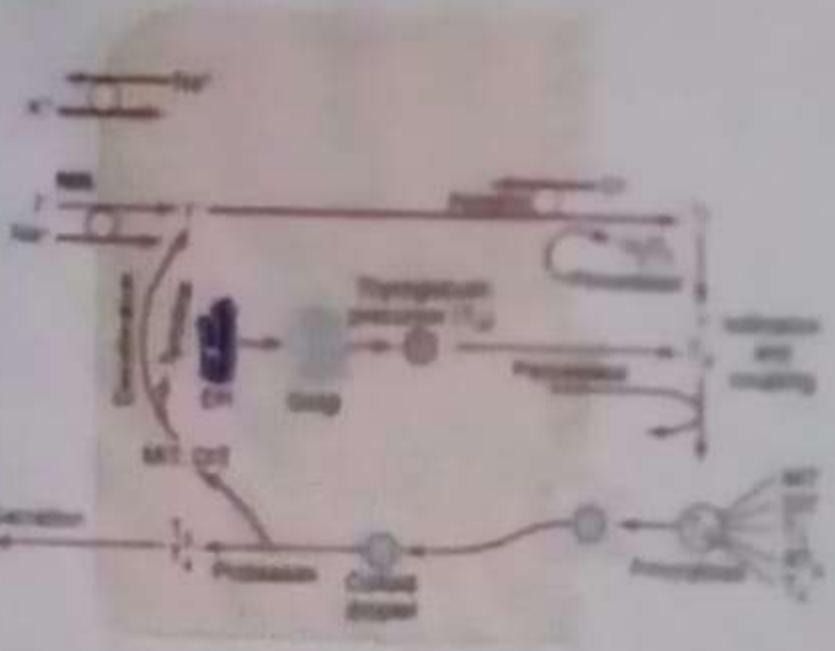

Obesity can be defined as an excess of body fat. A surrogate marker for body fat content is the body mass index (BMI), which is calculated as:

[redacted]

a) Write down the formula for calculating BMI

b) What are the units of BMI, weight and height

c) Name the organ "C" in which the boxed process is taking place, what is the name of this process?

(a) Write down the composition of RT3?

(b) Write down the composition of T_3?

(c) Write down the composition of T_4?

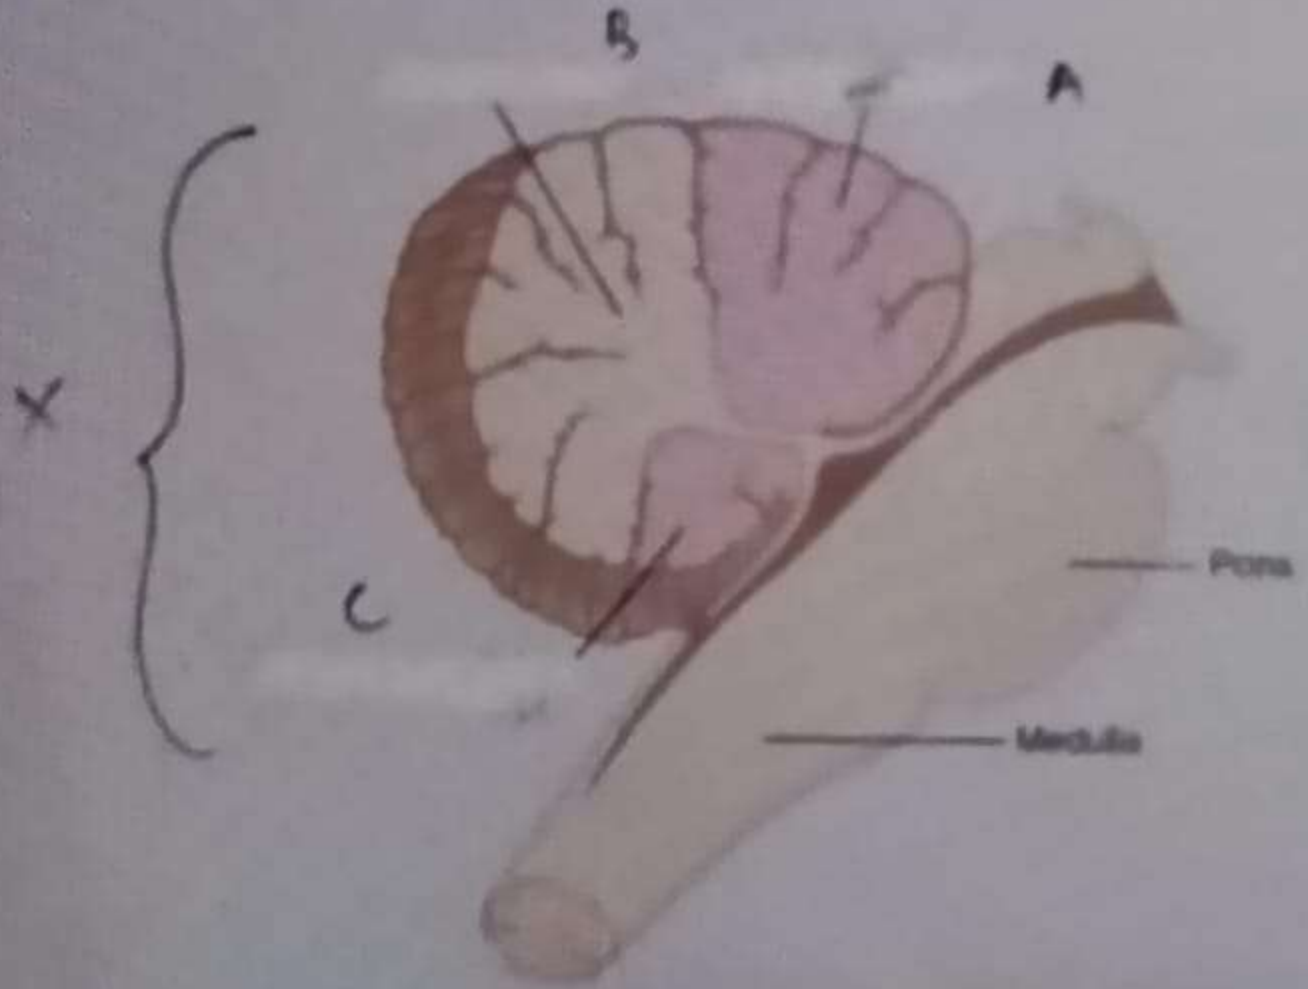

Figure 57-1 Anatomical lobes of the cerebellum as seen from the lateral side

(a) What is structure 'X'

(b) Label A, B and C

(c) Structure X is responsible for

(d) Structure X is found in which form of cranial cavity?
