RESPIRATORY SYSTEM OSPE

DAY 1

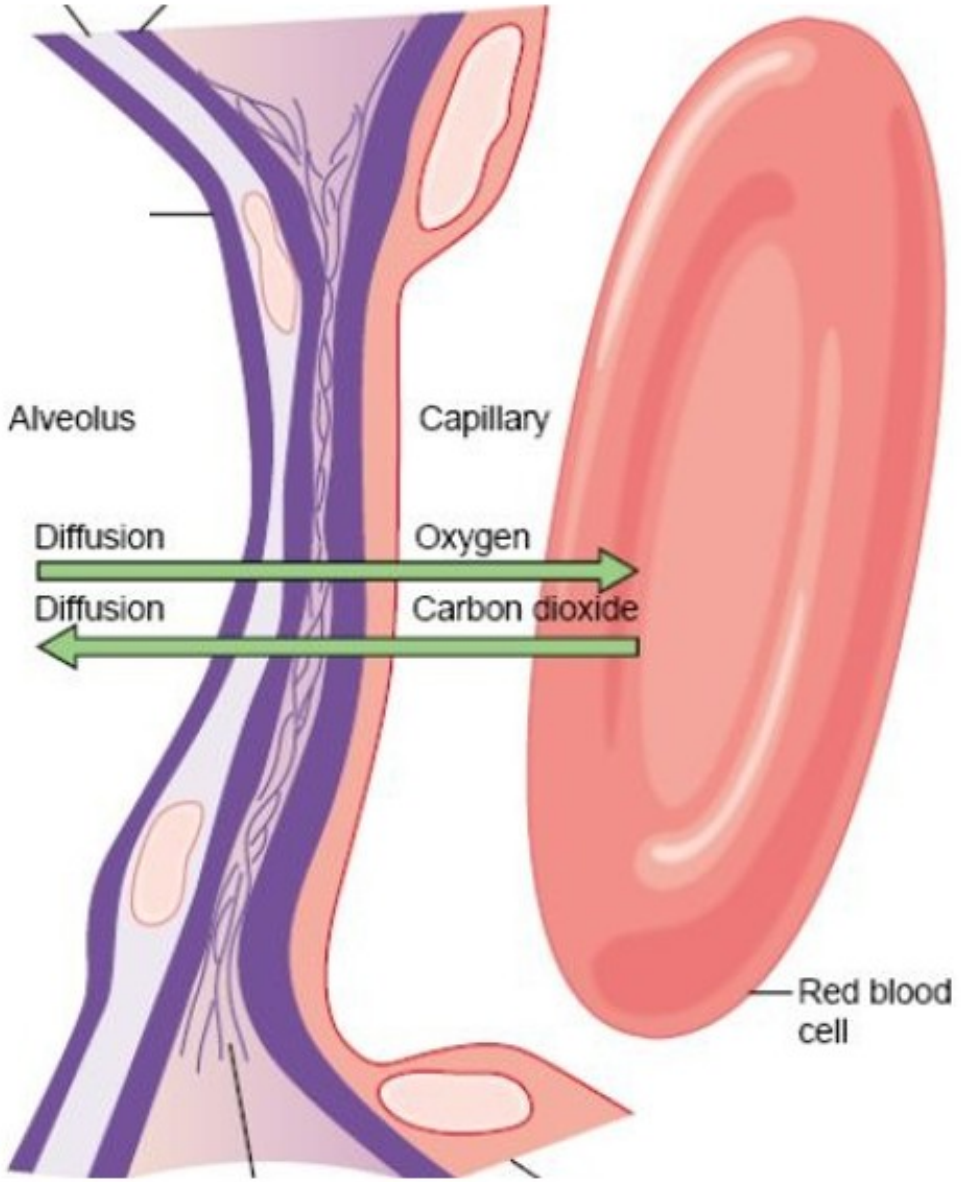

SPOT NO.1

1. Identify the graph shown.
2. Label the part marked A, E, F, and G.
3. Calculate Vital Capacity from the graph.
4. State one Physiological factor that decreases vital capacity.

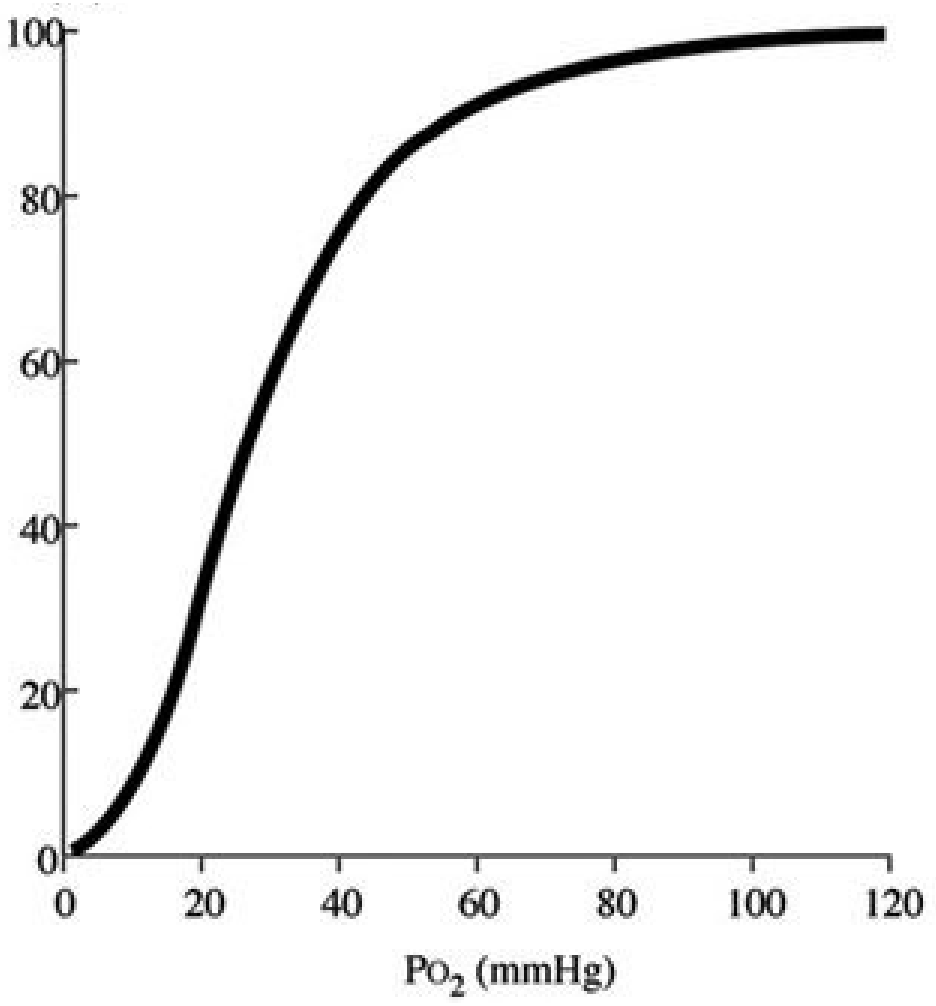

SPOT NO. 2

1. Identify the structure shown.
2. Name the layers that form this structure.
3. List any two factors that increase diffusion of gases across this membrane.
4. Name any two pathological conditions that decrease diffusion across this membrane.

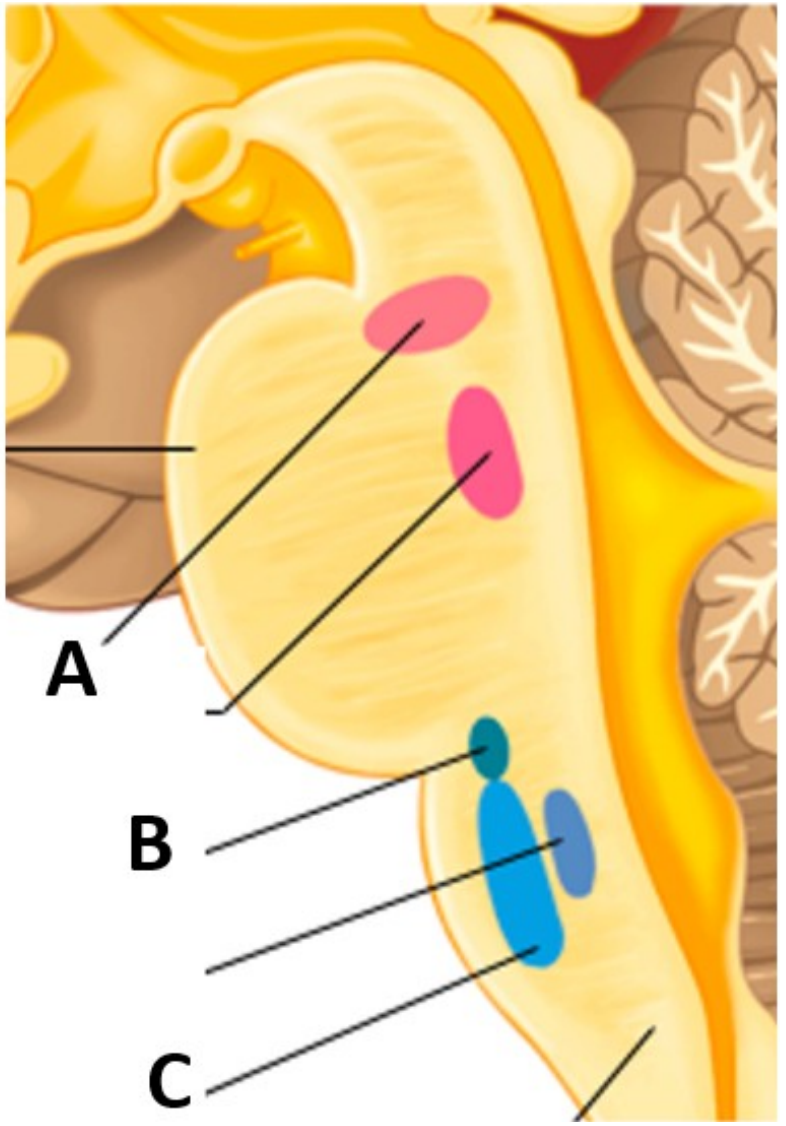

SPOT NO. 3

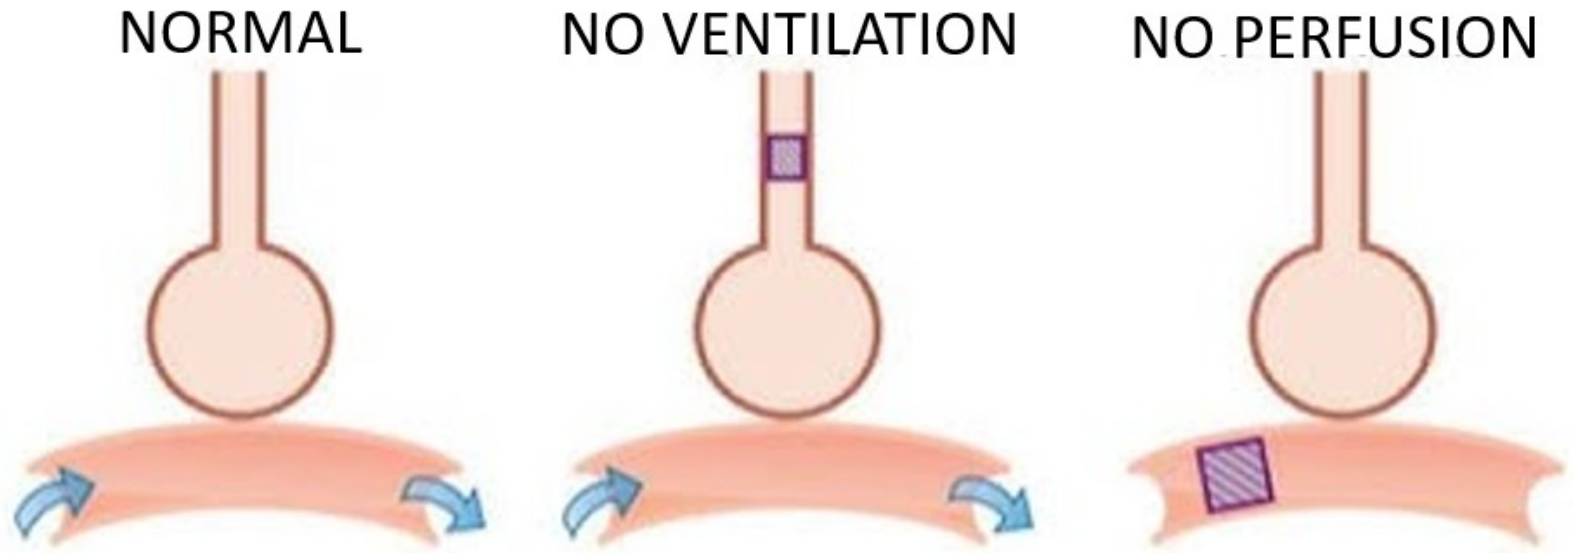

1. Identify the graph shown.
2. What does point "P_{50}" on this curve represent?
3. Name any two factors that shift this curve to the right.
4. Explain the physiological significance of the rightward shift.

SPOT NO. 4

1. Identify A, B, and C shown in the diagram.
2. Name the group of neurons primarily responsible for inspiration.
3. State the main stimulus that activates central chemoreceptors.
4. Name any one peripheral chemoreceptor and its main chemical stimulus.

SPOT NO. 5

1. Identify the physiological concept shown.
2. Name the condition represented by the alveolus with absent ventilation.
3. Name the condition represented by the alveolus with absent perfusion.
4. State what happens to arterial PO_2 in both of these conditions.
